PENERANGAN/INFORMATION :

1. Types of Working Language

1.1 In all kinds of work, language skills are needed in the communication with clients and partners near and far. Good language skills clearly enhance the chances of career development. The more demanding the tasks, the more widespread language skills are required of the employee. At the same time, the language skill requirements in worker vocations increase continually.

1.2 Working language can be define as the language that is used in a company, state, society or organization as means of communication. This language is necessary especially in organizations that consist of members from different language backgrounds in order to ensure that no errors in communication.

1.3 The main reason for establishing working languages is economical as the cost of translating all speeches, papers, decisions and memos into every language. However, the choice of which language is accepted is often with the native speakers of the languages. English, French, Spanish and German are the most common working languages for many international bodies. However, the working language depends on the area and type of organization. If they are not familiar with native languages, then interpretation is provided.

1.4 In daily work, all workers are to work together to solve the tasks on company. It is important that they understand each other. If this is not the case, misunderstandings in connection with the performance of the work may lead to accidents. The same is true of a number of scenarios of great importance to safety, then it is important that everyone understands each other. To ensure that all those worker understand related instructions and working responsibility in connection with their work, the company should create working guideline in a working language. Language of employment is need to identified for communication from ground to top level employees an organization so that all department activities can running smoothly.

---------------------------	---------------------------------	---

1.5 Practice in an organization who possess foreign workers such as in Malaysia, Bahasa Malaysia become the main workplace working language because it is an official language in relations with the government as well as a basic speech taught to lower workers. While English become a second language as a working reference materials, description of good abroad and language ties with foreign organization.

2. Language At Work

2.1 Use standard language and follow established rules of grammar. At the workplace you should always use standard language in your speech and writing. If you are from an area where nonstandard English is common and you use non-standard English yourself, make a conscious effort to speak standard, grammatical English. Pay attention to the way other professionals speak and write at work, and you will begin to notice ways that you can improve your own speech and writing.

2.2 Use a level of formality. When conversing in less formal situations or when writing less formal correspondence, you can use less formal English, but still remain respectful and professional at all times.

2.3 Do not use profanity. Swearing is never acceptable in the workplace.

2.4 Avoid biased or derogatory comments. Do not use bad language or language that is biased against any racial, ethnic, religious, age, or other group. Avoid comments, generalizations, examples, or jokes that affirm or perpetuate negative stereotypes.

2.5 Avoid slang. You should generally avoid slang in the workplace, even words or expressions that are commonly accepted in other settings. Be judicious in your use of idiomatic expressions, and particularly regionalisms, as well.

2.6 Be cautious when using jargon. Jargon should be used sparingly, and only when speaking or writing that will be familiar with the terms used. If you feel it is appropriate to use jargon for a more general audience, make sure you define the terms used.

---------------------------	---------------------------------	---

2.7 Be polite. You will be able to accomplish more and will undoubtedly have better relationships with co-workers and colleagues if you treat them respectfully and show sincere appreciation by using courtesy words.

2.8 Take a class. To learn even more about using appropriate language and about writing and speaking well in the workplace, you can take a class or attend a workshop or seminar on communicating effectively in the business world.

3. Types Of Working Reference Materials

3.1 Working reference materials is a description of the specific tasks and activities in an organization. This materials is a written document or statement that explaining about scope of duty. This will helped workers more focused into works based on scope, environment and condition of job.

3.2 Basically, there are four (4) working reference materials that normally used in workplaces:-

- i) Job responsibility guideline.
- ii) Job procedure.
- iii) Working procedure.
- iv) Working instruction

i) Job responsibility guideline

The main purpose of job description is to set out clearly and concisely what is duties and responsibilities of the post holder that are involved in a particular job. Before describe a job description, it is useful to go through a process known as Job Analysis. Job analysis is the process of obtaining information about jobs by determining what the duties, tasks, or activities of jobs are and about the qualification of the job-holders. This information is then used for developing Job description and job specification. By doing job analysis, we will gather the following information such as detail tasks of job, the duties of job, the place and the methods of performing jobs.

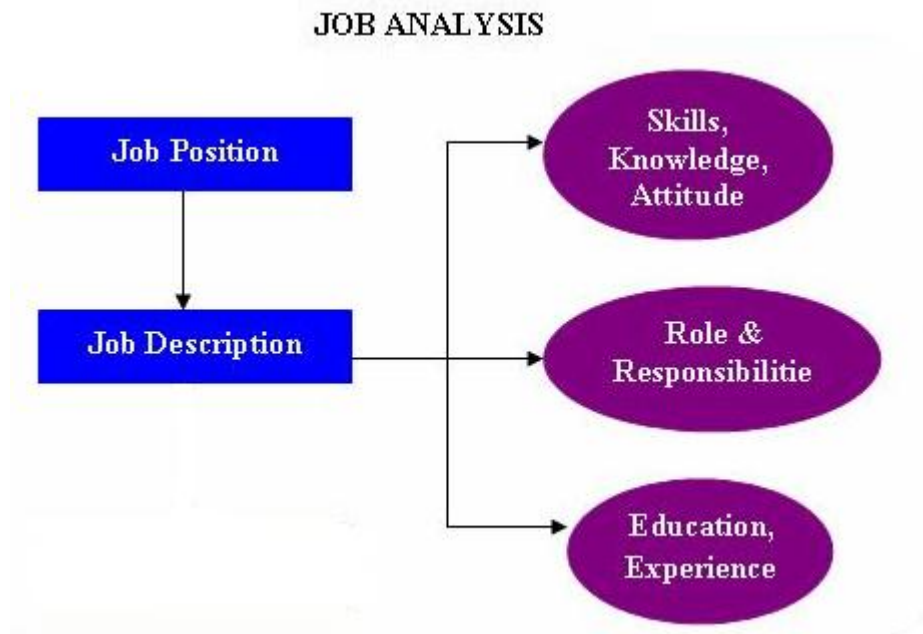

Figure 3.1 : Component of Job Analysis

ii) Job procedure

Job procedures are defined as a written procedure identifying the job to be performed in step by step order with detailed description of how the work is to be performed from start to finish in performing a task properly. They play an integral role in performing jobs safely, providing standardized training and being assistive with investigations. It is a sample procedure document that shows the process, tools and framework for analysis the duties of job and tasks. A well designed job procedure can help to understand the job properly.

Job procedure need to go through the process of job analysis. Job procedure needs to understand clearly the job requirements and job specification. Job analysis includes the study of the job itself as well as the analysis of job requirements. A job description specifies tasks, duties and working condition of a job itself, which details what the job holder is expected to do. A job specification stipulates what skills, abilities and other competences a job holder requires in order to perform the job effectively.

---------------------------	---------------------------------	---

iii. Working procedure

Work procedures play an integral role in performing jobs safely, providing standardized training and being assistive with investigations. A standard work procedure is the established way of performing a particular task. It is the sequence of steps to doing the job. It's not that we want to turn every worker into a robot, but we want everyone to follow recognized best practices.

a. Importance of Standard Working Procedure.

- Standard work procedure is the best way to ensure performance consistency. It works as a road map. If we don't have the road map, how do we know how to get where we are going?
- Standardized work procedures make continuous improvement possible. It can convey the expectation that everyone works the same way.
- Standard is a better way to perform a job. It does not have to be permanent. If someone discovers a better way, that can then become the new standard.
- Standards allow us to measure performance fairly. When people work the same way, performance expectations can be established. We can establish a fair output rate and judge everyone by that rate. Without standard work procedures, we could not establish legitimate expectations and managing the workforce would be difficult.
- Standardized work increases the likelihood that all activities will be carried out in a safe manner. Effective standards focus on safety and unsafe practices are formally eliminated from the process.
- Standardized work procedures are essential when training new employees. It is challenging enough for a new employee to learn a job. The process is made even more difficult if the new employee is shown different techniques by different employees.

---------------------------	---------------------------------	---

iv. Working Instruction.

Working instruction is a guideline that need to be followed in completing a particular task or how to perform a task. Work instructions are developed to guide workers in four key quality areas: training, reference, problem solving and continuous improvement. Each of these areas can be directly related to a cycle that identifies fundamental quality planning as "Plan-Do-Check-Act." It is important to establish (plan) the instructions that your people must execute. The references must then be effectively implemented (do) so they are accessible to personnel.

Documentation must be verified (check) so the instructions assist your problem-solving methodology. Finally, it is important to use (act) what has been defined in order to continuously improve.

- Training (Plan).

Training is the essential first step to ensuring that people are competent in their duties. It is important to define the type of training that each function is to receive. It is equally necessary to ensure that the trainers are executing the plan, including improvements made to the instructions. New employees should start their training with the process expert so they can observe how the process should be performed. It is here that detailed training discussions and hands-on activities take place between the expert and the trainee. The trainer uses the work instructions so new employees understand the basis for the tasks they are performing. The process is an opportunity for additional review of the work instruction content. The veteran can reaffirm the defined steps, and the new employee can confirm the validity of the process.

- Reference (Do).

This quality activity should focus on both access and format of the instructions. The documentation must be implemented so workers are not wary of having to locate the information relative to their areas of responsibility. Once employees have been trained and have demonstrated that they can be effective performers, you must ensure that the work

NO. KOD / CODE NO.	Z-009-1: 2015-M01/P(1/3)	Mukasurat / Page : 8 Drpd / of : 9
---------------------------	---------------------------------	---

instructions are available in case of questions. The instructions must be presented in an easy-to-understand format so that access and review will not take up valuable time. Write out how the instruction is to be performed specific to each core task. Avoid defining why the activity is performed. There should be no need for an expert organization to reaffirm why core tasks are needed. If the "why" information must be defined, keep that separate from the work instructions and make the additional information available as reference only training documents.

- **Problem Solving (Check).**

Problem solving is a quality activity that focuses on ensuring that the supporting processes are properly defined to achieve product quality. Work instructions are key documents to reference when internal or external non-conformances are identified. Make the review of the work instructions part of the corrective action process. Ask if the supporting instruction properly defines the process, then audit the instruction to confirm proper definition.

The operator/employee cannot be held fully accountable if the records of training are written to an inadequately defined work instruction. If the task is properly defined, the manner by which training is conducted might need to be revisited.

- **Continuous Improvement (Act).**

Work instructions should not be stagnant documents accessed only when auditors ask for them. Reviewing work instructions when improvement opportunities are identified demonstrates that they are "living documents." Instructions can be improved upon through document reviews, audits, a disciplined problem-solving process and, most importantly, the input from the experts who are performing the tasks. The current documentation should be the starting point for all improvements. Always improve upon existing documentation before creating a new document. Volume does not equate to continuous improvement.
