TAJUK/TITLE: SAFETY, HEALTH AND WELFARE FACILITIES

TUJUAN/PURPOSE:

This Information Sheet is intended to describe on the Safety, Health and Welfare Facilities. The person who is competent in this CA shall be able to adhere to health awareness activity, adhere to safety awareness activity and adhere to environment awareness activity, hence reducing exposure to hazards and risks as well as incidence of work-related injury and illness.

-------------------	-------------------------	-----------------------------------

PENERANGAN/INFORMATION:

1. Welfare Facilities

1.1 Sanitary conveniences and washing facilities

Suitable and sufficient sanitary conveniences and washing facilities should be provided at readily accessible places. They and the rooms containing them should be kept clean and be adequately ventilated and lit. Washing facilities should have running hot and cold or warm water, soap and clean towels or other means of cleaning or drying. If required by the type of work, showers should also be provided. Men and women should have separate facilities unless each facility is in a separate room with a lockable door and is for use by only one person at a time.

1.2 Drinking water

An adequate supply of high-quality drinking water, with an upward drinking jet or suitable cups, should be provided. Water should only be provided in refillable enclosed containers where it cannot be obtained directly from a mains supply. The containers should be refilled at least daily (unless they are chilled water dispensers where the containers are returned to the supplier for refilling). Bottled water/water dispensing systems may still be provided as a secondary source of drinking water. Drinking water does not have to be marked unless there is a significant risk of people drinking non-drinking water.

1.3 Accommodation for clothing and facilities for changing

Adequate, suitable and secure space should be provided to store workers' own clothing and special clothing. As far as is reasonably practicable the facilities should allow for drying clothing. Changing facilities should also be provided for workers who change into special work clothing. The facilities should be readily accessible from workrooms and washing and eating

NO. KOD /CODE NO.	Z-009-1:2015–M04/P(4/5)	MukaSurat / Page : Drpd/ of: 7
--------------------------	--------------------------------	---

facilities, and should ensure the privacy of the user, be of sufficient capacity, and be provided with seating.

1.4 Facilities for rest and to eat meals

Suitable and sufficient, readily accessible rest facilities should be provided. Seats should be provided for workers to use during breaks. These should be in a place where personal protective equipment need not be worn. Rest areas or rooms should be large enough and have sufficient seats with backrests and tables for the number of workers likely to use them at any one time, including suitable access and seating which is adequate for the number of disabled people at work. Where workers regularly eat meals at work, suitable and sufficient facilities should be provided for the purpose. Such facilities should also be provided where food would otherwise be likely to be contaminated. Work areas can be counted as rest areas and as eating facilities, provided they are adequately clean and there is a suitable surface on which to place food. Where provided, eating facilities should include a facility for preparing or obtaining a hot drink. Where hot food cannot be obtained in or reasonably near to the workplace, workers may need to be provided with a means for heating their own food (e.g. microwave oven). Canteens or restaurants may be used as rest facilities provided there is no obligation to purchase food. Suitable rest facilities should be provided for pregnant women and nursing mothers. They should be near to sanitary facilities and, where necessary, include the facility to lie down.

2 Health Facilities

2.1 Ventilation

Workplaces need to be adequately ventilated. Fresh, clean air should be drawn from a source outside the workplace, uncontaminated by discharges from flues, chimneys or other process outlets, and be circulated through the workrooms. Ventilation should also remove and dilute warm, humid air and provide air movement which gives a sense of freshness without causing a draught. If the workplace contains process or heating equipment or other sources of dust, fumes or vapours, more fresh air will be needed to provide

NO. KOD /CODE NO.	Z-009-1:2015–M04/P(4/5)	MukaSurat / Page : Drpd/ of: 7
--------------------------	--------------------------------	---

adequate ventilation. Windows or other openings may provide sufficient ventilation but, where necessary, mechanical ventilation systems should be provided and regularly maintained.

2.2 Temperatures in indoor workplaces

Environmental factors (such as humidity and sources of heat in the workplace) combine with personal factors (such as the clothing a worker is wearing and how physically demanding their work is) to influence what is called someone's 'thermal comfort'. Individual personal preference makes it difficult to specify a thermal environment which satisfies everyone. For workplaces where the activity is mainly sedentary, for example offices, the temperature should normally be at least 16 °C. If work involves physical effort it should be at least 13 °C (unless other laws require lower temperatures).

2.3 Work in hot or cold environments

The risk to the health of workers increases as conditions move further away from those generally accepted as comfortable. Risk of heat stress arises, for example, from working in high air temperatures, exposure to high thermal radiation or high levels of humidity, such as those found in foundries, glass works and laundries. Cold stress may arise, for example, from working in cold stores, food preparation areas and in the open air during winter. Assessment of the risk to workers' health from working in either a hot or cold environment needs to consider both personal and environmental factors. Personal factors include body activity, the amount and type of clothing, and duration of exposure. Environmental factors include ambient temperature and radiant heat; and if the work is outside, sunlight, wind velocity and the presence of rain or snow. Workplace health, safety and welfare:

2.4 Lighting

Lighting should be sufficient to enable people to work and move about safely. If necessary, local lighting should be provided at individual workstations and

NO. KOD /CODE NO.	Z-009-1:2015–M04/P(4/5)	MukaSurat / Page : Drpd/ of: 7
--------------------------	--------------------------------	---

at places of particular risk such as crossing points on traffic routes. Lighting and light fittings should not create any hazard. Automatic emergency lighting, powered by an independent source, should be provided where sudden loss of light would create a risk.

2.5 Cleanliness and waste materials

Every workplace and the furniture, furnishings and fittings should be kept clean and it should be possible to keep the surfaces of floors, walls and ceilings clean. Cleaning and the removal of waste should be carried out as necessary by an effective method. Waste should be stored in suitable receptacles.

2.6 Room dimensions and space

Workrooms should have enough free space to allow people to move about with ease. The volume of the room when empty, divided by the number of people normally working in it, should be at least 11 cubic meters. All or part of a room over 3.0 m high should be counted as 3.0 m high. 11 cubic meters per person is a minimum and may be insufficient depending on the layout, contents and the nature of the work.

2.7 Workstations and seating

Workstations should be suitable for the people using them and for the work they do. People should be able to leave workstations swiftly in an emergency. If work can or must be done sitting, seats which are suitable for the people using them and for the work they do should be provided. Seating should give adequate support for the lower back, and footrests should be provided for workers who cannot place their feet flat on the floor.

3 Safety Facilities

To keep your workplace safe you must:

- i. properly maintain your premises and work equipment;
- ii. keep floors and traffic routes free from obstruction;

NO. KOD /CODE NO.	Z-009-1:2015–M04/P(4/5)	MukaSurat / Page : Drpd/ of: 7
--------------------------	--------------------------------	---

- iii. have windows that can be opened and also cleaned safely;
- iv. make sure that any transparent (e.g. glass) doors or walls are protected or made of safety material.
- v. clean to eat and drink during breaks.

SOALAN/QUESTION :

1. Give three welfare facilities should have at any work place?

.....

.....

2. Why health facilities are required to provide at any workplace?

.....

.....

3. What do you means by emergency facilities?

.....

.....
