PENERANGAN/INFORMATION :

1. INTRODUCTION OF TEAMWORK

Teamwork is often a crucial part of a business, as it is often necessary for colleagues to work well together, trying their best in any circumstances. Teamwork is the process of working collaboratively with a group of people in order to achieve a goal that means people will try to cooperate, using their individual skills and providing constructive feedback, despite any personal conflict between individuals. Professional roles and responsibilities will include a variety of work assignments. More of your working time will be spent working in a team. Some reminders to us:

1.1 Teams are not just a group

Research on teams indicates that teamwork surpasses what can be accomplished by individuals and many work groups. True teamwork is a higher level of performance and described by terms such as "synergy" or "high performance". Groups that learn how to work together become teams.

1.2 Quality is not just a given

Some team members try to rationalize the performance capability of their team "given whom we had in the group". Team performance can be changed and will always be influenced by what individuals do or don't do and by the way the team members interact to address performance challenges (team processes).

1.3 Teamwork is not just about personalities

Each team will have a different combination of personalities. Teamwork doesn't depend on the personalities of team members; it depends on the ability of the team to figure out how to work together that maximizes the contribution each team member can make to the project goals. Some team members are surprised that someone "so different" from them is a very competent team member.

1.4 Top 5 teamwork process objectives

- i) Learn the importance of discussion and agreement on team processes.
- ii) Learn the importance of communications among team members.

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 3 Drpd / of : 15
---------------------------	--------------------------------	---

- iii) Learn to prepare for team activities, then reflect on the results and assess team performance.
- iv) Understand team roles and relationships.
- v) Learn the importance of documenting process and results,

2. TEAMWORK ADVANTAGES

Framed wall hangings extolling the value of "Teamwork" appear in offices everywhere, so the term might sound a bit cliched. However, small organization that keep the teamwork concept at the forefront of how they operate can reap some real advantages. Teamwork is what keeps all parts of the business machine running smoothly.

2.1 Motivation and Support

Utilizing teamwork in an organization bolsters the weaknesses of some with the strengths of others. If one person excels at making conference calls, while another is great at typing up documents, then each can support each other with the talent that would be lacking if each were forced to work solo. Likewise, one worker is bound to have an off day where enthusiasm is lagging, so another member of the team can help encourage that worker to do a better job. The motivation team members can give each other creates greater camaraderie, leading to greater fulfillment within relationships at work.

2.2 Accountability

Teamwork creates an environment in which workers are accountable for what they produce, because other team members are counting on each individual piece to make the puzzle or the project work to everyone's satisfaction. When all workers do their part, it lends them a sense of pride and belonging, as well as status among the team. An individual's accomplishment such as a catchy ad slogan idea gives that worker attention and recognition among his peers.

2.3 Creative Solutions

As the old saying goes, two heads are better than one. And with a team, even more so. Solutions to problems and fresh ideas are generated by the brainstorming that teamwork fosters. Teams allow skills, knowledge, opinions and experiences to be pooled together for the benefit of the organization as a whole. This leads to better

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 4 Drpd / of : 15
---------------------------	--------------------------------	---

productivity for every member of the team, and every task completed by each worker leads to one noticeable outcome that the whole team and company can take proud in.

2.4 Competition and Growth

Teamwork allows individual workers to see how other workers do their jobs, and can be a source of education and inspiration. Less experienced workers can learn and grow from their interactions with senior-level team members. Opportunities to learn from each others strengths can also lead to a healthy sense of competition that motivates the team to produce greater quality or quantity of product or service.

3. THE USE OF TEAMWORK IN AN ORGANIZATION

Many human resources specialists and management professionals are familiar with the concept of using the word "team" as an acronym: Together Everyone Achieves More. The concept is an ideal representation of the importance of cooperation and teamwork within a workplace or other organizational structure. In fact, the use of teamwork in an organization greatly enhances and improves productivity and increases overall profit and success.

3.1 Types of Teams

Online organization encyclopedia, Reference for Organization, breaks down organizational teamwork into several different types of teams. Problem-solving teams composed of cross-trained workers are brought together to resolve issues within the organizational structure. Leadership teams include heads of specific departments to develop company goals and strategic marketing directions. Self-directed teams are issued a goal by the organization and are left to their own discretion to determine how to accomplish it. Virtual teams are formed by companies who rely on technology to conduct long-distance organization, meetings and conferences in real time.

3.2 Requirements for Teamwork

Certain requirements and characteristics exist that make an effective organizational team, according to the Leadership Quality website. One of the primary components of successful teamwork is a clear and precise goal followed by a straightforward path to achieve it. A successful team has knowledgeable staff members and

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 5 Drpd / of : 15
---------------------------	--------------------------------	---

assigns specific duties relevant to their expertise. Some social characteristics of a professional work team include the ability to establish effective and cooperative working relationships, good interpersonal skills and the willingness to share in successes and failures.

3.3 Employee Benefits

Working as part of an organizational team is beneficial to employees and foundation members in a number of ways, according to Career Post Magazine. The opportunity to expand your professional knowledge by collaborating with members of different expertise provides an abundance of learning opportunities. You'll also experience less personal responsibility when a project fails because, as a team, the burden falls on all who were involved. In fact, your chances of failure are often reduced if not eliminated since projects are monitored by several team members, more eyes to catch mistakes. Other perks include increased social contact in the workplace and opportunities to for professional development.

3.4 Organizational Benefits

Good morale within an organization leads to increased productivity, and a well-integrated team leads to good morale. Many companies find that teamwork encourages product innovation, boosts morale, increases productivity and creates more accountable employees. Teamwork promotes collaboration, commitment, motivation, dependability and accountability among staff or organizational members. Imposing team responsibilities helps increase individual strengths, improves delegation and reduces or eliminates certain lower levels of management.

3.5 Teamwork Skills

i) Contribute

- Prepare your individual assignments
- Participate as a peer at team meetings
- Listen to other members of the team
- Articulate your ideas appropriately

ii) Coordinate

- Discuss team expectations and team processes
- Identify team leader and team member roles.
- Plan team meetings

- Manage deadlines.
 - Provide information as needed to other team members or those outside the team.
- iv) Collaborate
- Know how to assesses the quality of team interaction and discussion
 - Periodically reflect on team process and fit with project tasks
 - Discuss conflicting viewpoints and team member's differences
 - Develop team ability to initiate with others and anticipate problems in product development or team work
 - Select ideas and/or create new ideas effectively and efficiently as a team

4. WORK GOALS AND TARGETS

Whatever you're aiming to achieve, you'll have no way of knowing how close you've come unless you set clear targets and measure how close you've come to hitting them.

4.1 Why you should set targets

The purpose of setting targets goes far beyond a simple benchmark to dictate if 2010's been a job well done or not. Targets provide a structure to constantly assess the performance of your organization. At the top level, targets should crystallise your vision for the year. Below that, they provide a way of breaking that vision down to outline what needs to happen to achieve it: at what rate you should expect to see progress (quarterly, monthly, weekly targets etc), and which departments and individuals or functions of your organization are responsible for what. Targets create structure. You shouldn't be able to set budgets or allocate resources until you have identified what your objectives are for every part of your organization. You should be able to stop and see if you're on track at any point if you have targets in place across your organization - and if you're not where you should be, you can quickly analyse where the problems lie. You'll also be able to identify areas that are flourishing and present greater opportunity more quickly.

Achieving targets also promotes a sense of ownership among employees - particularly if you tie pay to achievement, as Arno does. "It's like our employees have got their own little organization within our organization, and they're trying to hit

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 7 Drpd / of : 15
---------------------------	--------------------------------	---

goals for their organization." Targets for the immediate future help you plan for subsequent years too. You can measure actual performance against the objectives you set, and start spotting seasonal trends. This end-of-year analysis allows you to lay out your next set of targets in a more informed way, with a set of data to work from and, hopefully, improve upon.

4.2 Before you start

Targets don't just have to be about growth and sales (though they often are). You could work on training, employee engagement, research expenditure versus return, press coverage, brand awareness, customer loyalty - the list goes on. Assess your current situation thoroughly - a SWOT analysis will help - to establish which areas of the organization you need to focus on in the next 12 months to thrive. Or, indeed, your ambitions for all areas of your organization. Breaking down any bigger ambitions you have for the next few years into year-by-year goals will obviously be a good starting point, but you also need to hone in on the specific parts of the organization that need attention. Think of the way the different cogs in your organization jog each other into motion. If you want more sales, you may need to improve marketing and website visits, so you'll need to set targets for those to reach on overall aim for organization growth. Your targets should all be 'SMART', whichever area you're focusing on. That means each presses all the following buttons:

i) S: Specific

Use hard numbers and definitive goals rather than fluffy aims, and focus on one part of the organization per target. So, say, 'I want to see sales increase by 10%' rather than 'I want to see the organization grow'.

ii) M: Measurable

Make sure you can measure your goal. Use percentages or unit numbers or another real measure. This allows you to assess performance and will show you precisely when a target has been hit.

lii) A: Achievable

Over-ambitious goals can be incredibly damaging to morale and plans. Make sure targets are within reason.

iv) R: realistic

Only create goals that you can achieve with the resources you

Already have.

v) T: time

Set deadlines for each objective.

5. COMMUNICATION SKILL

A more accurate way of looking at the process of communication is probably as a dynamic, circuitous process in which elements such as non-verbal behaviour and individual styles of interpreting and ascribing meaning to events have significant influence. Strategies such as constructing a clear, unambiguous message can encourage effective communication, but so too can seeking to understand meanings imposed by the listener via processes such as actively listening to feedback, as we shall see.

Many models have been developed to simplify and summarise the complex reality of the communication process and to aid our understanding. Some of these are more helpful than others, but all have their shortcomings. The 'Typical Communication Model' developed by Clapitt (2005) demonstrates a number of key elements in the communication process

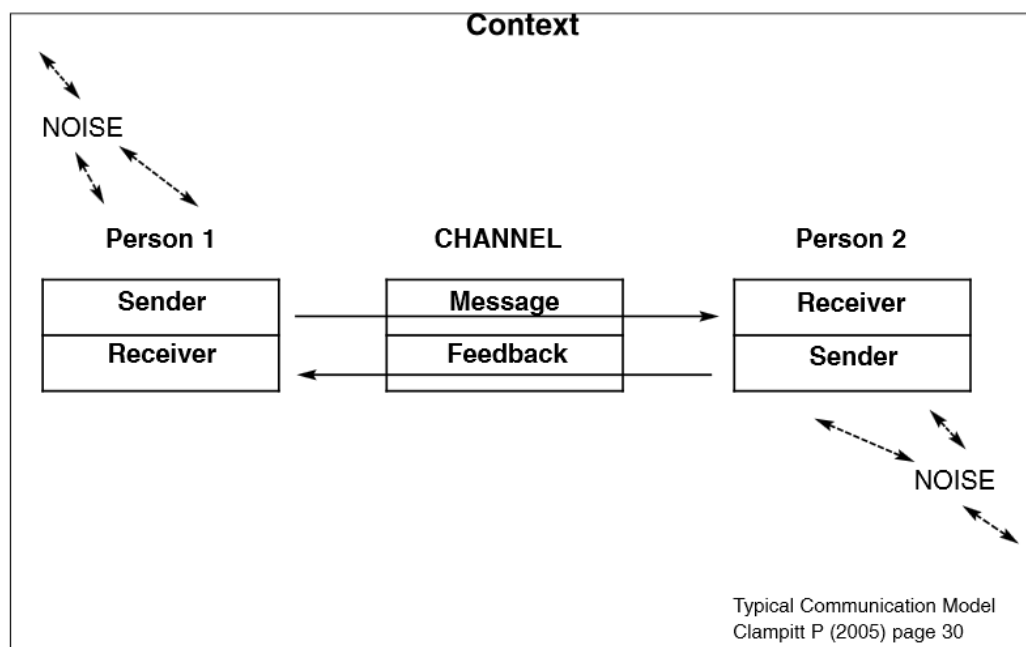

Figure 5.1 Typical communication model

5.1 The Communication Process

Person 1 constructs and sends a message. Messages are the signals and symbols that we use to convey what we want to transmit. They can occur in various ways,

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 9 Drpd / of : 15
---------------------------	--------------------------------	---

including visual (non-verbal, written), auditory (verbal and sub-vocal speech), tactile (touch, bodily contact) and olfactory (perfumes, aftershaves) formats. In order to send the message, it must be encoded into words, as well as tone, inflection, facial expression, and other non-verbal language. While skills such as clear thinking, concise expression of plain english, logical association of ideas and organised speech are important, especially to specific contexts such as giving presentations they do not ensure that effective communication will take place. The meaning of the message is not contained solely in the words, as factors such as non-verbal cues, the context and the people involved will heavily influence meaning. It is important to note that unintended as well as intended meanings may be communicated via non-verbal leakage.

i. The Cannel

In Clampitt's (2005) model, this refers to the means used to deliver messages and the related formats. Means used to communicate can include face to face, telephone, pager, written, radio and video communication. In face to face communication, which is most often preferred for communication of more important matters, communication occurs through visual, auditory and olfactory formats, while the tactile medium may or may not be used. Skilled communicators will choose the channel most appropriate to the specific goals sought at that time.

ii. Receiving Message

For effective communication to take place, the message must be accurately decoded and reconstructed by person 2, from the signals received from person 1. However, even if the "encoding" is carried out very well; this in itself does not ensure that it will be "decoded" accurately. The meaning ascribed to the message may vary according to the person doing the interpreting, the context in which the message was given and the total information communicated. In terms of the person doing the interpreting, we all have underlying beliefs and understandings of the world which will influence the ways in which we tend to understand and ascribe meaning to incoming data.

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 10 Drpd / of : 15
---------------------------	--------------------------------	--

5.2 Effective Communication

Being able to communicate with others is one of the best life skills a person can develop. Someone who can effectively communicate thoughts, ideas, and feelings is better equipped for success both on the job and in personal relationships. Effective communication is much more than being able to talk; it is also the ability to listen and understand others, to “read” and interpret body language and to know the best ways to get our points across.

- i. To be a better speaker:
 - Be considerate. Don’t dominate the conversation by talking only about yourself. Use questions to probe the person’s feelings or opinions on the topic of conversation.
 - Speak clearly. Don’t mumble or talk in the opposite direction of the listener. Also, use words that you know the listener might understand.
 - Stay focused on the conversation. Doing something else while you are talking, such as typing or working on a car, sends a message to the listener that you don’t think the conversation is worthy of your full attention, and it could inhibit the listener’s responses to what you say.
 - Be brief. Don’t over talk a point. It may cause the other person to lose interest in the conversation.
- ii. To be a better listener:
 - Eliminate distractions. If you find it hard to concentrate because of your surroundings, move to another area or schedule another time to talk.
 - Make time to listen. If you are in a hurry or don’t have time, let the speaker know and schedule another time to talk. Better to delay the conversation than to risk having an important conversation cut short.
 - Practice reflective listening. Repeat what you think the speaker said to ensure you heard the speaker correctly. This is called “reflective listening” and it is identified by statements as “If I understand you correctly...” reflective listening gives the speaker a chance to clarify

a point and ensures that both the speaker and the listener are on the same page.

- Listen for understanding. If you don't understand what is being said, don't be shy or embarrassed to ask questions. It is better to ask for clarification than to risk a misunderstanding that could lead to problems later on.
- Wait for the speaker to finish. Don't interrupt, even when it's apparent the person speaking is gathering his/her thoughts.
- Pay attention to what is being said. When someone is speaking, don't spend that time preparing your remarks or working on a project – listen.
- Keep eye contact. Doing so shows that you are interested in what is being said, which may encourage the speaker to express him/herself more freely.

iii. The fine points of arguing fairly:

Everyone gets into arguments, but good communicators know how to argue fairly. Here are some guidelines to keep your arguments from going too far south.

- Don't resort to name calling. Never, ever call a partner a hurtful name. Try the five-second rule (below) to choose words that are appropriate and relevant to the disagreement.
- Try the five-second rule. Because we sometimes say things without thinking of the consequences, wait five seconds before you comment on what is just been said. Use this time to exercise control and think about what you should say.
- Stick to the issue at hand. Talk only about the present point of disagreement. Bringing up or engaging in discussions about past problems adds the proverbial fuel to the fire. It also shifts the focus from the present problem, which means it probably won't get resolved and will cause trouble again.
- Manage your anger. Anger is a natural emotion, especially when you are having a disagreement. But don't allow your anger to turn violent. If you feel your anger reaching that point, leave the scene immediately and do something safe to calm yourself down – counting

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 12 Drpd / of : 15
---------------------------	--------------------------------	--

to 20, taking a brisk walk or exercising. Don't resort to drugs or alcohol or drive your car away on all cylinders.

- Speak and act with regard for the other person. Remember with whom you are arguing. It may be a marriage partner or someone whom you love and care about deeply. Although that is probably the last thing on your mind when you are having a disagreement, it should be the first.

6. NEGOTIATION

Negotiation is a method by which people settle differences. It is a process by which compromise or agreement is reached while avoiding argument and dispute. In any disagreement, individuals understandably aim to achieve the best possible outcome for their position (or perhaps an organisation they represent). However, the principles of fairness, seeking mutual benefit and maintaining a relationship are the keys to a successful outcome.

6.1 Why Negotiate?

It is inevitable that, from time-to-time, conflict and disagreement will arise as the differing needs, wants, aims and beliefs of people are brought together. Without negotiation, such conflicts may lead to argument and resentment resulting in one or all of the parties feeling dissatisfied. The point of negotiation is to try to reach agreements without causing future barriers to communications.

6.2 Stages of Negotiation

In order to achieve a desirable outcome, it may be useful to follow a structured approach to negotiation. For example, in a work situation a meeting may need to be arranged in which all parties involved can come together.

The process of negotiation includes the following stages:

- Preparation
- Discussion
- Clarification of goals
- Negotiate towards a Win-Win outcome
- Agreement
- Implementation of a course of action

i) Preparation

Before any negotiation takes place, a decision needs to be taken as to when and where a meeting will take place to discuss the problem and who will attend. Setting a limited time-scale can also be helpful to prevent the disagreement continuing.

This stage involves ensuring all the pertinent facts of the situation are known in order to clarify your own position. In the work example above, this would include knowing the 'rules' of your organisation, to whom help is given, when help is not felt appropriate and the grounds for such refusals. Your organisation may well have policies to which you can refer in preparation for the negotiation.

Undertaking preparation before discussing the disagreement will help to avoid further conflict and unnecessarily wasting time during the meeting.

ii) Discussion

During this stage, individuals or members of each side put forward the case as they see it, i.e. their understanding of the situation. Key skills during this stage include questioning, listening and clarifying. Sometimes it is helpful to take notes during the discussion stage to record all points put forward in case there is need for further clarification. It is extremely important to listen, as when disagreement takes place it is easy to make the mistake of saying too much and listening too little. Each side should have an equal opportunity to present their case.

iii) Clarifying Goals

From the discussion, the goals, interests and viewpoints of both sides of the disagreement need to be clarified. It is helpful to list these factors in order of priority. Through this clarification it is often possible to identify or establish some common ground. Clarification is an essential part of the negotiation process, without it misunderstandings are likely to occur which may cause problems and barriers to reaching a beneficial outcome.

NO. KOD / CODE NO.	Z-009-2:2015-M02/P(2/4)	Muka Surat / Page : 14 Drpd / of : 15
---------------------------	--------------------------------	--

iv) Negotiate Towards a Win-Win Outcome

This stage focuses on what is termed a 'win-win' outcome where both sides feel they have gained something positive through the process of negotiation and both sides feel their point of view has been taken into consideration. A win-win outcome is usually the best result. Although this may not always be possible, through negotiation, it should be the ultimate goal. Suggestions of alternative strategies and compromises need to be considered at this point. Compromises are often positive alternatives which can often achieve greater benefit for all concerned compared to holding to the original positions.

v) Useful Negotiation Skills

Good interpersonal skills are essential and useful for effective negotiations in both formal situations, in less formal or one-to-one negotiations. Let's take a look at some skills that you may want to whip out when dealing with negotiating.

- Effective verbal communication.
- Listening skills to reduce misunderstanding.
- Rapport Building to build stronger working relationships between the people you are negotiating with based on mutual respect.
- Problem solving skills.
- Decision making skills and techniques.
- Assertiveness to show your partners and the other party that you feel Strong about the process.
- The ability to deal calmly and rationally with difficult situations.

vi) Tip for successful negotiations

- Present your arguments clearly, concisely, and with confidence to avoid any confusion or unnecessary conflict with the other party.
- Remain Calm during the process. Avoid losing your temper if discussions become heated or if things do not go your way.
- Be aware of any verbal or non verbal communication cues that are demonstrated by the other party. Watch for body language and other non verbal signals between partners.
