TAJUK / TITLE : WORK PERFORMANCE DELIVERY

TUJUAN / PURPOSE :

This Information Sheet is intended to describe the abilities to counsel, lead, delegate, discuss solution to conflicts and identify work targets and job performance. The person who is competent in this CA shall be able to handle job coordination responsibly and lead his/her subordinates and/or peers to deliver work results in a controlled working environment.

-------------------	-------------------------	--

PENERANGAN/INFORMATION :

1. Introduction

In delivering performance of works, one has to be aware and acquaintance with his nature and types of of works. He is expected to have a vast knowledge in his job functions in order to be effective and competent in monitoring and evaluating his subordinates performance.

A superior is expected to acquire the knowhow of works under his supervision and gathering information at work place before practising and monitoring staff performance and abilities.

2. Types of Work

In today's workplace, there are two types of work; **product** and **service based** work. Both types involve business of selling a product. The ultimate difference between the two is that the product type actually sells a physical, tangible product, while the service type sells skills/expertise as the main product. In service based work, potential clients invest in the salesperson or owner, which makes the client relationship even more valuable and important than in the product-based work. Service type work rely on people and the client experience, which can be risky. It is a commercial enterprise that provides work performed in an expert manner by an individual or team for the benefit of its customers and provides intangible products, such as accounting, banking, consulting, cleaning, landscaping, education, insurance, treatment, and transportation services.

Meanwhile, product-based work assures that the product is going to be the same from customer to customer, making the customer experience fairly predictable. The product here refers to tangible and discernible items that the organization produces.

2.1 Key Concepts of Product and Service Types of Work

Products and services are closely aligned, and, in fact, most products have an element of service in them. For example, a car buyer now buys a comprehensive bundle of service benefits, in addition to the tangible components of the car¹. However, there is a distinct difference between them and it is important to establish some working definitions. One way to think of them is from the clients' point of view. When a client asks "what can you make for me?" they are asking about products; when a client asks "what can you do for

NO. KOD <i>ICODE NO.</i>	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 3 Drpd / of : 13
---------------------------------	--------------------------------	--

me?" they are asking about services. While a product is something that can be measured and counted, a service is less concrete and is the result of the application of skills and expertise towards an identified need. A product is something you can point at, whereas a service, as The Economist defines it, is any activity "you can't drop on your foot"² although this definition doesn't hold up when the products are digital in form – weightless objects that have no mass or material definition aside from the physical media on which they exist. Nonetheless, even in file-based workflows, there is a distinction between a product being produced and a service provided to fill a need.

2.2 Advantages and Disadvantages of Product and Service Types of Work

In services you will get to work in a lot of different technologies but it is very difficult to choose which one you want to work in and depends on a lot of factors. In service companies they tend to look for more general proficiency, so it is not very difficult to break in if you have your basics right.

In product oriented companies the criteria is much more rigid, so you have to absolutely fit the bill and have a very good grasp of things required for that particular position. The pay scale also reflects the same .

In service oriented companies the work loads tend to get disproportionate due to poor estimation or lack of right people so the work life balance can get skewed, on the bright side there is always a much higher chance to travel abroad to work in short or long term projects. Sometimes you will work across diversified technologies and might enjoy the experience.

In product oriented companies the work life balance is generally better as you will tend to work on a particular product for quite some time and your skills and job requirements are a close match.

3. Monitoring Procedure

Monitoring can be implemented either directly or indirectly. Direct monitoring involves a supervisor directly observing performance (for example reading a report, emails, minutes or letters prepared by the employee). Indirect monitoring occurs when the first-level supervisor or second-level supervisor receives feedback on the employee's performance from other sources (for example from a client, customer, stakeholder or peer).

NO. KOD ICODE NO.	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 4 Drpd / of : 13
--------------------------	--------------------------------	--

Here are some basic direct and indirect monitoring techniques:

- i) Observation
- ii) Talking with people
- iii) Monitoring work performance and output
- iv) Monitoring absenteeism and staff turnover
- v) Employee surveys (before, during and after the change)
- vi) Baseline measuring before and after the change
- vii) Benchmarking with other work units
- viii) Financial recording
- ix) Usage recording
- x) Focus groups to provide direct feedback
- xi) Questionnaires
- xii) Feedback sheets
- xiii) Measuring the time it takes to complete tasks
- xiv) Recording errors
- xv) Recording questions asked
- xvi) Monitoring returns (for example, customer returns)
- xvii) Logging the level of complaints.

3.1 Monitoring Performance

Monitoring performance is an essential part of a supervisor's day-to-day work, and is a responsibility placed on superiors by the Agreement. Employees and their first-level supervisors have the responsibility to regularly monitor performance against the agreed Key Expected Results (KER) on the employee's Performance Agreement. Employees can then be provided with timely, honest and appropriate feedback about the standard of their work performance. Second-level supervisors have a support role in this process.

The wider the range of methods you use, the more effective the monitoring will be because using a range of methods means you will gain a more balanced view of the employee's performance. This means you can give the type of feedback that employee's tell us they want more of, because they find it constructive and motivational, and which improves performance.

3.2 Monitoring performance against quantifiable objectives

NO. KOD <i>ICODE NO.</i>	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 5 Drpd / of : 13
---------------------------------	--------------------------------	--

- i) Methods
- ii) Sales reports
- iii) Deadlines met
- iv) Error reports
- v) Accuracy reports
- vi) Documents
- vii) Proposals
- viii) Plans
- ix) Budget forecasts

These tend to be the monitoring methods most superiors are comfortable with because they're about what the employee does. It's easy to see if your employee is achieving a sales target or submitting accurate work and these are great monitoring methods for the quantity, quality and time elements of the job

The difficulty arises when these are the only monitoring methods a supervisor/manager uses because most jobs are not just about the 'what', they're also about 'how' the employees do their job. About:

- i) how they work as a team member
- ii) how they work with customers
- iii) how they deal with problems
- iv) how they deal with change and so on

If you only monitor the 'what' of the job you will only be monitoring half of the job. And if you only monitor half of the job then possibly only that portion the employees will feel it's worth focusing on!

3.3 Monitoring Performance against Behavioral Objectives

Here are three ways to monitor behaviours:

i) Observation

Observation is taking a planned approach to watching the employees 'in action'. The idea is that you plan to observe the specific behaviours that you have described in the performance objectives. For example, if you have agreed that a performance objective for team work is 'offering help to team members' and 'contributing to team meetings' then those are the specific behaviours you plan to observe. So it is about

NO. KOD ICODE NO.	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 6 Drpd / of : 13
--------------------------	--------------------------------	--

looking at the performance objectives you have agreed that relate to behavioural elements of the job and then planning how you will observe those behaviours e.g. paying particular attention to the employee's behaviour in the next team meeting.

ii) Report back

Report back is about your employee reporting back to you on their performance. This is a really useful technique where the employee is responsible for 'evidencing' their performance against the objectives you've agreed

A good example would be if you had an agreed a performance objective from 'effective time management' which included 'takes action to manage interruptions'. Then the employee would simply report back to you with some examples of when they had taken action to manage interruptions

iii) Feedback

Feedback is about getting the response from people on the employee's performance. This could be from;

- a) Customers
- b) Suppliers
- c) Team members
- d) Other departments

It's important that you only look for feedback;

- a) As agreed between you and the employee and
- b) Described in the performance objectives

4. Performance Evaluation

Performance evaluation is a formal determination of an individual's job-related actions and their outcomes within a particular position or setting. In financial trading, its objective is to assess the extent to which the individual added wealth to the firm and/or its clients, and whether his or her achievement was above or below the market or industry norms. Also, called performance measurement.

4.1 Personal Performance Evaluation System

NO. KOD ICODE NO.	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 7 Drpd / of : 13
--------------------------	--------------------------------	--

The personal performance evaluation system comprises the procedures for evaluating the performance of individuals, the associated evaluation factors and the evaluation scale. The impact of personal performance on the personal salary element is stipulated in the collective agreement.

The evaluation discussion is an important element in the work of supervisors and staff administration, and in interaction between individual employees and their superiors. A successful evaluation discussion requires careful preparation. Individual employees may prepare for it, for example, by evaluating their own performance in advance. Both parties must set aside time for the discussion away from the distraction of other duties.

i) Personal Performance Evaluation

The personal performance of an employee is evaluated in the course of an evaluation discussion. The evaluation focuses on the performance of individual employees in the duties assigned in their job descriptions and otherwise by the employer, and on the objectives assigned for the employees in the previous performance appraisal or in some other corresponding manner.

The job performance of an individual is evaluated on an overall assessment scale of 1-5 with respect to the three main criteria specified below. Sub-criteria are used for assessing each main criterion, but are not evaluated independently. The individual performance level is determined as the average of the evaluation outcomes for the main criteria.

A supervisor will evaluate the employee's performance. The supervisor records the outcome of the evaluation and its grounds, and these are communicated to the employee. The supervisor in question will propose a performance level on the basis of the evaluation. If the outcome of the evaluation does not accord with the employee's own view of his or her performance, then the employee will enter his or her own view and the reasons for it in the evaluation summary. The performance evaluation and performance level will be confirmed by the employer in the light of such factors as the grounds for the performance evaluation, the general evaluation policy and the performance of employees working in duties of equivalent job requirement.

NO. KOD ICODE NO.	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 8 Drpd / of : 13
--------------------------	--------------------------------	--

Reasons shall be given in particular for unusual evaluations of job performance that satisfy the job requirements. If the performance level is 1 or 2, then measures for supporting improved performance shall be mutually agreed.

ii) The Evaluation Criteria / Factors

The main criteria of personal performance evaluation for staff are:

a) Vocational competence

- Skills, evaluated with reference to such factors as:
 - Overall command of the employee's duties; knowledge, skills, methods and tools.
 - Maintenance of vocational skills.
 - Ability to focus on essentials.
- Personal development, evaluated with reference to such factors as:
 - How the employee responds to new challenges and ideas, and views new duties and practices.
 - An active role in improving the job.
 - How the employee improves personal skills.
- Plurality of skills / special ability, evaluated with reference to such factors as:
 - Whether the employee has skills exceeding the employee's own basic duties that benefit the workplace.
 - Special ability or expertise.
 - General diversity of the employee's skills.

b) Responsibility at work and activity in the workplace

- Spontaneity, evaluated with reference to such factors as:
 - How spontaneous the employee is in his/her work
 - How the employee takes the initiative in improving working methods and the workplace

NO. KOD <i>ICODE NO.</i>	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 9 Drpd / of : 13
---------------------------------	--------------------------------	--

c) Co-operation skills, evaluated with reference to such factors like:

- How the employee co-operates at workplace, and with external parties and stakeholders.
- How the employee promotes community and a positive atmosphere.
- How the employee deals with conflict.

d) Commitment to work and colleagues/co-workers, evaluated with reference to such factors as:

- How the employee participates in improving the workplace.
- How the employee adheres to mutually agreed practices.
- How the employee is committed to duties and to the aims of the employee's workplace.
- The extent of the employee's involvement in discharging universality community functions.

Employees working in supervisory capacities will be evaluated for success and improvement in supervisory and leadership work (including participation in supervisory and leadership training) and for supervisory skills in general. The evaluation will consider how the supervisor supports, encourages and motivates employees to achieve their objectives and how the supervisor fosters a positive, effective and productive workplace.

iii) Quality and performance

a) Productivity, evaluated with reference to such factors as:

- Achievement, such as quantitative objectives or deadlines imposed on the employee.

b) Quality of work, evaluated with reference to such factors as:

- Quality of work in relation to the demands and goals of duties.

c) Economy, evaluated with reference to such factors as:

- Overall economy in discharging duties.
- Careful use of resources.

iv) The Evaluation Scale

NO. KOD <i>ICODE NO.</i>	Z-009-3:2015-M03/P(6/6)	Mukasurat / Page : 10 Drpd / of : 13
---------------------------------	--------------------------------	---

The evaluation scale is as follows:

- Level 5 The employee's performance is excellent and clearly exceeds all job requirements and the quantitative and qualitative objectives assigned.
- Level 4 The employee's performance satisfies all job requirements very well. The performance exceeds the quantitative and qualitative objectives assigned in many respects.
- Level 3 The employee's performance satisfies the job requirements and the objectives assigned well. Performance attains a high quality standard in key fields of duty.
- Level 2 The employee's performance satisfies the basic job requirements and the principal objectives assigned. Some aspects of performance are nevertheless need improvement.
- Level 1 There is a substantial need for improvement in the employee's performance.
