PENERANGAN/INFORMATION :

1. Work priority

1.1 Introduction

For many people, managing priorities often causes a potential source of conflict. The correct work behaviour is summarised in the phrase 'what you do second is equally important to what you do first'. This routine can be achieved if time is controlled for the purpose of priority management. This module looks at your ability to focus on the priority of job objectives and the fundamental problem of conflict between priority of importance and priority of time.

1.2 Aims of the works priority management are as follows;

- i) To ensure you define your job objectives in terms of 'A' priority work
- ii) To have you apply priority of time effectively
- iii) To explore ways of overcoming shortage of time
- iv) To explain the concept and application of 'A' Time
- v) To determine how to plan 'A' priority personal work
- vi) To understand how to schedule 'A' priority work in minimising priority conflict
- vii) To develop and implement action plans for improvement

1.3 Performance Cluster for Priority Management

The diagram and chart indicate the scope of impact that Priority Management has on other performance skill areas within the Model of Performance Skills.

Managing SELF	Managing PEOPLE	Managing WORK
Creativity and Originality Ethical Leadership Personal Communication Personal Contributions Personal Organisation Personal Values Stress Management Work Personality	Delegation Management Meetings Management Motivating People Teamwork Transforming Leadership	Change Management Decision Judgement Decision Management Human Resource Management Information Management Job Knowledge Objective Setting Organisation Knowledge Time Management

2. Types of urgent situations in the workplace.

2.1 An urgent or emergency situation is a situation that poses an immediate risk to health, life, property, or environment. Most emergencies require urgent intervention to prevent a worsening of the situation, although in some situations, mitigation may not be possible and agencies may only be able to offer palliative care for the aftermath.

---------------------------	--------------------------------	--------------------------------------

While some emergencies are self-evident (such as a natural disaster that threatens many lives), many smaller incidents require that an observer (or affected party) decide whether it qualifies as an emergency. The precise definition of an emergency, the agencies involved and the procedures used, vary by jurisdiction, and this is usually set by the government, whose agencies (emergency services) are responsible for emergency planning and management.

2.2 Types of emergencies are describe as follows;

i) Dangers to life.

Many emergencies cause an immediate danger to the life of people involved. This can range from emergencies affecting a single person, such as the entire range of medical emergencies including heart attacks, strokes, cardiac arrest and trauma, to incidents that affect large numbers of people such as natural disasters including tornadoes, hurricanes, floods, mudslides and outbreaks of diseases such as cholera, Ebola, and malaria.

Most agencies consider these the highest priority emergency, which follows the general school of thought that nothing is more important than human life.

ii) Dangers to health.

Some emergencies are not necessarily immediately threatening to life, but might have serious implications for the continued health and well-being of a person or persons (though a health emergency can subsequently escalate to life-threatening).

The causes of a 'health' emergency are often very similar to the causes of an emergency threatening to life, which includes medical emergencies and natural disasters, although the range of incidents that can be categorised here is far greater than those that cause a danger to life (such as broken limbs, which do not usually cause death, but immediate intervention is required if the person is to recover properly). Many life emergencies, such as cardiac arrest, are also health emergencies.

---------------------------	--------------------------------	--------------------------------------

iii) Dangers to the environment.

Some emergencies do not immediately endanger life, health or property, but do affect the natural environment and creatures living within it. Not all agencies consider this a genuine emergency, but it can have far reaching effects on animals and the long term condition of the land. Examples would include forest fires and marine oil spills.

3. Urgent situation procedures

3.1 When developing your emergency action procedures, it's a good idea to look at a wide variety of potential emergencies that could happen in or near your workplace. Your plan should be tailored to your work site and include information about all potential sources of emergencies. Developing an emergency action plan means you should do a hazard assessment to determine what, if any, physical or chemical hazards in your workplaces could cause an emergency. If you have more than one work site, each site should have an emergency action plan.

3.2 At a minimum, your emergency action plan must include the following:

- i) A preferred method for reporting fires and other emergencies
- ii) An evacuation policy and procedure
- iii) Emergency escape procedures and route assignments, such as floor plans, workplace maps, and safe or refuge areas
- iv) Names, titles, departments, and telephone numbers of individuals both within and outside your company to contact for additional information or explanation of duties and responsibilities under the emergency plan
- v) Procedures for employees who remain to perform or shut down critical plant operations, operate fire extinguishers, or perform other essential services that cannot be shut down for every emergency alarm before evacuating
- vi) Rescue and medical duties for any workers designated to perform them
- vii) You also may want to consider designating an assembly location and procedures to account for all employees after an evacuation.

---------------------------	--------------------------------	--

3.3 In addition, although they are not specifically required by OSHA, you may find it helpful to include the following in your plan:

- i) Disaster Damage Vehicle and Building
- ii) The site of an alternative communications center to be used in the event of a fire or explosion; and
- iii) A secure onsite or off site location to store originals or duplicate copies of accounting records, legal documents, your employee's emergency contact lists, and other essential records.

3.4 Your plan must include a way to alert employees, including disabled workers, to evacuate or take other action, and it must describe how to report emergencies. Among the steps you must take are the following;

- i) Make sure alarms are distinctive and recognized by all employees as a signal to evacuate the work area or perform actions identified in your plan.
- ii) Make available an emergency communications system such as a public address system, portable radio unit, or other means to notify employees of the emergency and to contact local law enforcement, the fire department, and others.

3.5 Stipulate that alarms must be able to be heard, seen, or otherwise perceived by everyone in the workplace. You might want to consider providing an auxiliary power supply in the event that electricity is shut off. Although it is not specifically required by OSHA, you also may want to consider the following:

- i) Using tactile devices to alert employees who would not otherwise be able to recognize an audible or visual alarm
- ii) Providing an updated list of key personnel such as the plant manager or physician, in order of priority, to notify in the event of an emergency during off-duty hours.
