TAJUK/TITLE: WORK ASSET MANAGEMENT

TUJUAN/PURPOSE:

The person who is competent in this CA shall be able to be aware of work asset usage.
Upon completion of this competency unit trainees will be able to:-

1. Be aware of asset usage
2. Negotiate acceptance and deliveries
3. Implement human resources practices

PENERANGAN/INFORMATION:

1. ASSETS

1.1 Definition

Asset is a resource controlled by the entity as a result of past events and from which future economic benefits are expected to flow to the entity (IASB Framework).

1.2 Explanation

In simple words, asset is something which a business owns or controls to benefit from its use in some way. It may be something which directly generates revenue for the entity (e.g. a machine, inventory) or it may be something which supports the primary operations of the organization (e.g. office building).

1.3 Classification

Assets may be classified into Current and Non-Current. The distinction is made on the basis of time period in which the economic benefits from the asset will flow to the entity.

- i) Current Assets are ones that an entity expects to use within one-year time from the reporting date.
- ii) Non Current Assets are those whose benefits are expected to last more than one year from the reporting date.

1.4 Types and Examples

Following are the most common types of Assets and their Classification along with the economic benefits derived from those assets.

Asset	Classification	Economic Benefit
Machine	Non-current	Used for the production of goods for sale to customer.
Office Building	Non-current	Provides space to employees for administering company affairs

Vehicle	Non-current	Used in the transportation of company products and also for commuting.
Inventory	Current	Cash is generated from the sale of inventory.
Cash	Current	Cash
Receivables	Current	Will eventually result in inflow of cash.

2. RESOURCE DEPLOYMENT PROCEDURE

Proactive support of the works strategy and of management by the human resource executive becomes vital. That support is critical to the success of the organization's strategic plan and deployment process. Strategic deployment is the full integration and alignment of all company strategies, goals and functions. Research and development, manufacturing, human resources, finance, marketing, quality, and customer service goals are incorporated into one unified vision, mission and key strategies. Everyone in the organization is marching together in the same direction; each person knows what his/her contribution is expected to be and how it will be measured.

Successful integration of the human resource function with the strategic deployment process will:

- i) Reduce operating costs
- ii) Increase customer satisfaction and shareholder value
- iii) Create a responsive, flexible and disciplined works system
- iv) Encourage interdepartmental cooperation
- v) Develop opportunities for breakthroughs in operational procedures
- vi) Empower managers and employees to get things done
- vii) Eliminate wasteful efforts on initiatives and projects not in the strategic plan
- viii) Avoid conflicts in plans for technology, manufacturing, and marketing
- ix) Focus resources toward achievable financial goals.

---------------------------	--------------------------------	--

There usually are ten steps to implement a strategy into the culture, fabric and full-scale operations of an organization. The human resource function should participate in all of them as outlined.

2.1 Establish a vision:

Strategic deployment begins with a focus on customers. A common vision defines the benefits a customer, employee, shareholder, or society can expect from an organization. If there is agreement on overall direction, the means to achieve it can be flexible. The HR function should participate in this vision by providing knowledge on the organization's ability to deliver on the vision.

2.2 Agree on a Mission:

Often confused with vision, a mission statement answers the question "What type of works are we in?" and clarifies an organization's purpose or reason for existence - nothing more. HR can play an active role in determining if the culture is supportive of the mission.

2.3 Develop Key Strategies:

The first step in converting a vision to an achievable plan is the development of four or five strategies that contribute to the overall vision. Obtain, validate and assess data in five areas: customer loyalty and satisfaction, costs of poor quality, company culture and employee satisfaction, the internal works process including suppliers, and competitive benchmarking. HR is responsible for the employee strategies to enable the vision to be achieved by assuring the culture is ready.

2.4 Develop Strategic Goals:

Be specific, measurable and within a set time - typically 1-2 years. Seven areas must be examined: product performance, competitive performance, quality improvement, cost of poor quality, performance of works processes, customer satisfaction, and customer loyalty and retention. HR is responsible to define educational, retention and performance goals to enable other strategies to be completed.

2.5 Establish Values:

Values are what an organization stands for and believes in, supported by actions and deeds from management. Training and communication of the values for all employees is fundamental. This is one of the HR department's most critical missions in strategic

---------------------------	--------------------------------	--

development. HR can conduct a values assessment and align employees to the values system.

2.6 Communicate Company Policies:

Policy declarations as a guide to managerial action are necessary during change, and result from thorough deliberation by management with approval at the highest level. There has been an unprecedented surge in publishing policies based on quality and customer focus. Communications to and from employees has always been a component of HR. Today HR must find instantaneous ways to filter information from employees and provide management with a snapshot of their feelings and ideas.

2.7 Provide Top Management Leadership:

A basic step in establishing any strategic plan is participation of senior management acting as an executive council. The council is responsible for executing the strategic works plan and monitoring key performance indicators. HR executives and functions should not just get the employees ready. The HR executives should be at the important strategic meetings to assure a balance between technological projects and cultural projects.

2.9 Deploy Goals:

Deployment of long- and short-term goals is the conversion into operational plans and projects - subdividing goals and allocating sub-goals with careful attention to details, participants, schedule, and milestones. Projects can be based on the approach used for a quality methodology called Six Sigma for reducing costs, waste, or improving product and process performance. HR should also prepare its own processes and staff to meet the new strategies and goals.

2.10 Review Progress:

A formal review will increase the probability of reaching the goals. An organization should look at the gaps between measurement of current conditions and the targets. An essential tool for management is the audit or independent review of performance. Management must confirm that systems are in place, operating properly, and that desired results are being achieved. HR should follow up on an annual basis to evaluate the plan's effectiveness.

Benefits:

- i) Goals become clear - vagueness disappears. HR is seen as a value added resource.
- ii) Planning makes goals achievable. Planning can reduce the need for hiring personnel.
- iii) Controlling the process ensures goals can be reached.
- iv) Chronic wastes are cut.

3. WORK PLAN EXECUTION

The Work Plan Execution Process ensures that planned work activities are carried out in uneffective and efficient way while ensuring that measurements against works plans, specifications, and the original works feasibility concept continue to be collected, analyzed and acted on throughout the works lifecycle. Without a defined works execution process each works team would execute works using their own best practices, experience, and methods; allowing certain control, tracking and corrective action activities to be missed.

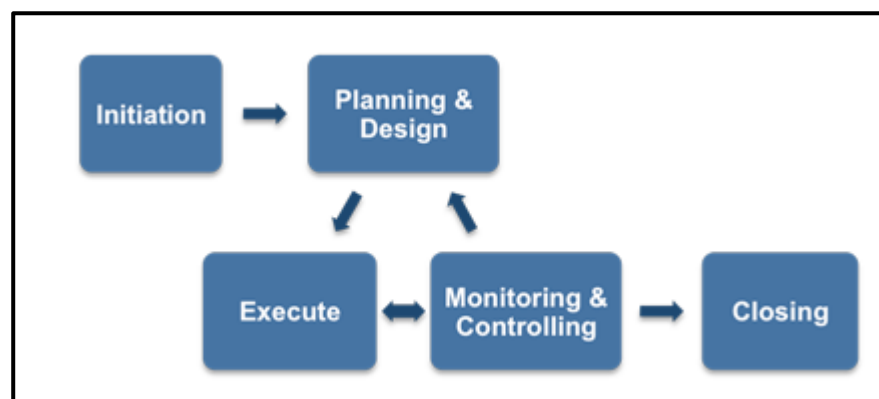

Figure I: Work Plan Execution Structure

It is important to note that works execution relies heavily on the plans developed in the Planning Phase. There is already enough work to do within the Execution Phase of the works, therefore having to reinvent ways of dealing with risk, change requests, training

---------------------------	--------------------------------	--

and resource issues, and other such obstacles to progress are impractical and undesirable

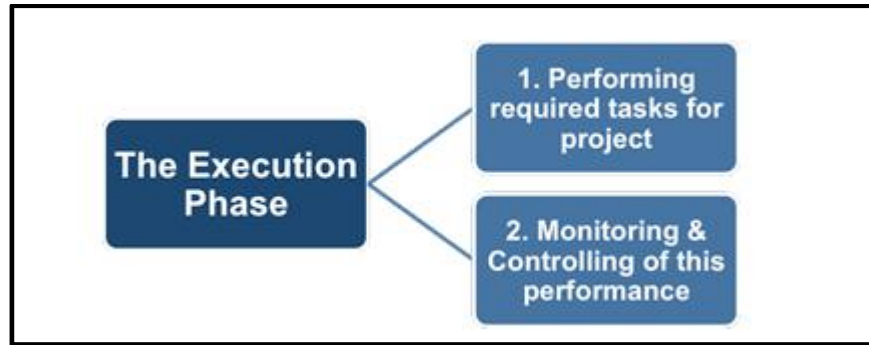

Figure 2: Execution Phase

It is also critical during the Execution Phase that the Works Manager supports and monitors the execution of other important works plans such as the Communications Plan, the Risk Plan and Procurement Plan via daily interaction with the works team and stakeholders

3.1 How to Plan Work Execution

This is often the phase when management gets more engaged and excited to see things being produced. Preparing to begin the works work involves the following tasks:

i) Assigning people to all work roles:

Confirm the individuals who'll perform the works work, and negotiate agreements with them and their managers to assure they'll be available to work on the works team.

ii) Introducing team members to each other and to the work:

Help people begin developing interpersonal relationships with each other. Help them appreciate the overall purpose of the works and how the different parts will interact and support each other.

iii) Giving and explaining tasks to all team members:

Describe to all team members what work they're responsible for producing and how the team members will coordinate their efforts.

iv) Defining how the team will perform its essential functions:

Decide how the team will handle routine communications, make different work decisions, and resolve conflicts. Develop any procedures that may be required to guide performance of these functions.

v) Setting up necessary tracking systems:

Decide which element use to track schedules, work effort, and expenditures, and set them up.

vi) Announcing the works to the organization:

Let the workers know that your works exists, what it will produce, and when it will begin and end.

3.2 Effective Execution Decisions

Three decisions you can make as a leader to ensure effective execution in works are to know your end game, know the players involved in the works, and establish a clear timeline of actionable steps to accomplish the goal.

i) Know Your outcome of your work

Have this vision and communicate it to the team so they know where they are headed at the end of the works. Keep communicating this vision and be sure it's in front of your team every chance you get.

Ability to cast the vision and help the team know what success looks like once the works is completed. No clear vision or target to hit is a recipe for disaster. Nothing can seem more frustrating at times than when following someone who cannot articulate where they are taking you.

ii) Know Key Players Involved

"Knowing" has two elements. First, they must know who the necessary people are in the works. Secondly, you need to know their specific roles. Leadership is a process that involves people. You need people to achieve the goal. Knowing the "who" element will help you define their roles, which will alleviate potential confusion and lost man-hours as the works progresses.

---------------------------	--------------------------------	---

Consider outlining on paper the people involved in the works and what their roles will be in your overall plan of action. We are wired to work, but with a purpose. As a leader, part of your job is to clearly outline for your team their role in the works. This task keeps all accountable and contributing toward your shared vision.

iii) Establish a Timeline of Actionable Steps

We all have good intentions when we start our work day, but nothing is more important than knowing what's most important. Establishing a clear timeline of prioritized actionable steps to execute can often mean the difference of success or failure. Breaking down the work in manageable, actionable steps will help you develop a roadmap for success and keep you on track toward accomplishing that overarching vision necessary to keep your organization moving forward.

SOALAN / QUESTIONS:

1. List and explain four (4) types assets with examples.

- i) _____
- ii) _____
- iii) _____
- iv) _____

2. List and explain four (4) most effective human resources functions.

- i) _____
- ii) _____
- iii) _____
- iv) _____

3. State four (4) factors and explain how to plan work executions.

- i) _____
- ii) _____
- iii) _____
- iv) _____

4. State four (4) factors required for effective execution of decisions?

- i) _____
- ii) _____
- iii) _____
- iv) _____
