TAJUK / TITLE: SYSTEMATIC DOCUMENTATION

TUJUAN / PURPOSE:

This Information Sheet is intended to describe on the Organizational Behavior Awareness within organization and its related regulatory affecting the practice. The person who is competent in this CA shall be able to infuse and ensure systematic documentation at workplace and aware of any regulatory acts related to it.

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 2 Drpd / Of : 15
--------------------------	--------------------------------	--

PENERANGAN / INFORMATION

1. Overview

An organization puts their internal documentation controls in place to limit risks, such as losses, poor performance on contracts, poor quality and non-compliance with regulations.

1.1 Documentation Procedures

Documentation procedures detail the documents that the organization requires to implement their control systems and assign responsibility personnel for tasks and actions. Small businesses usually require less documentations or controls because each employee carries out several job functions and responsibilities.

Effective documentation procedures need less efficient controls to come out with businesses competitive advantages. To be effective in documentation procedures it has to cover the followings.

- i) Documentation procedures usually specify that an employee manual must contain all relevant policy and procedure documentations.
- ii) The detailed manual must include and state clearly the person who is responsible for writing and updating the policies and procedures.
- iii) How the organization communicates them to the employees.

Documentation procedures typically specify that employees receive a copy of the manual when they start work, acknowledged the receipt and agree to adhere to the policies and procedures. They will also receive updates as changes are done from time to time.

1.2 Practice Proper and Systematic Filing

A file refers to the physical unit of information contained within a paper or electronic folder. Records are held in files to enhance accessibility and identification.

Files are created and included in a filing system to provide formal evidence of the activities dealt with in an organization. The purpose of filings is to capture, maintain and

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 3 Drpd / Of : 15
--------------------------	--------------------------------	--

provide access to evidence of transactions over time in accordance with accountability and work done.

The establishment of a coherent filing system provides

- i) Faster and systematic filing
- ii) Faster retrieval of information
- iii) Greater protection of information
- iv) Increased administrative stability
- v) Continuity and efficiency

1.3 Good and Systematic Filing Scheme

Requirements of a good and systematic filing scheme is by keeping it simple to reduce errors and to facilitate usability to all level of employees. It should, therefore, be designed for the normal requirements of the organization and not for remote or exceptional possibility.

1.4 Filing System

Files should contain information which is linked to the activities and functions. The system should have a structured numeric or alphanumeric referencing system in which each element equates with a function of the file title to a maximum of four elements, namely;

- i) Alphabetical
- ii) Numerical
- iii) Alpha-numeric (eg: ABX;cy-12/1) and
- iv) Keyword

The most commonly used is the alphanumeric. A good point on this system is that, the letters can indicate the function or activities process covered by the files.

1.5 Filing Process

In systematic filing process it must have the followings;

- i) Suitability
The system should meet the individual users / departmental needs.
- ii) Good Maintenance
In order to maintain a filing system the followings are required;
 - a. A good follow-up system (e.g. tracer cards)
 - b. Adequate security
 - c. Proper control of record creation and filing additions
 - d. Secure and adequate storage for archived material
- iii) Adaptability
The system should be sufficiently flexible to meet the future needs of the organization.

There are many ways of filing arrangement. One example is illustrated below for a typical method commonly practiced.

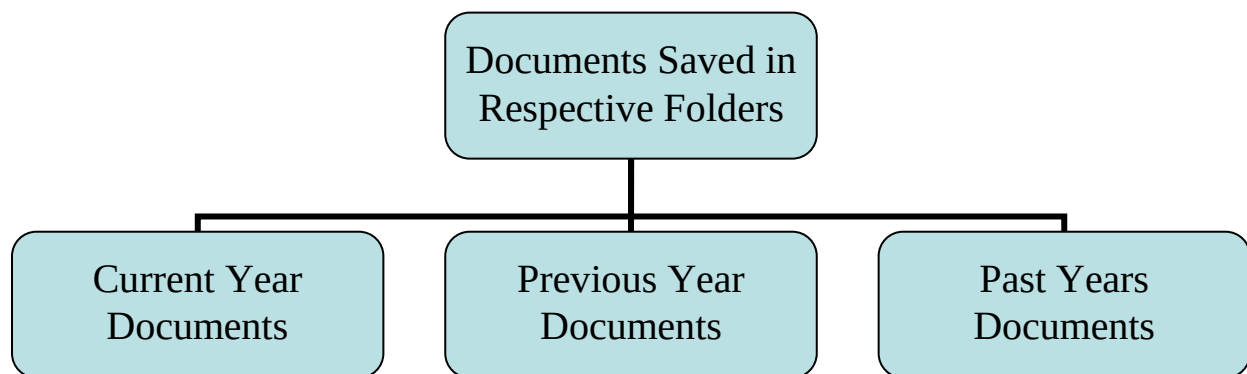

Figure 1: Filing Method

2. Implement Proper Indexing

Indexing is a way of sorting a number of records on multiple fields. Creating an index on a field in a table creates another data structure which holds the field value, and pointer to the record it relates to. This index structure is then sorted, allowing binary searches to be performed on it.

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 5 Drpd / Of : 15
--------------------------	--------------------------------	--

2.1 Data Storage

When data is stored in a storage device, it is stored as blocks of data. These blocks are accessed in their entirety, making them the atomic disk access operation. Disk blocks are structured in much the same way as linked lists; both contain a section for data, a pointer to the location of the next node or block, and both need not be stored alongside.

Due to the fact that a number of records can only be sorted on one field, we can state that searching on a field that isn't sorted requires a Linear Search which requires $N/2$ block accesses (on average), where N is the number of blocks that the table spans. If that field is a non-key field (i.e. doesn't contain unique entries) then the entire table space must be searched at N block accesses.

Whereas with a sorted field, a binary search may be used, this has $\log_2 N$ block accesses. Also since the data is sorted given a non-key field, the rest of the table doesn't need to be searched for duplicate values, once a higher value is found. Thus the performance increase is substantial.

2.2 Establish Proper Recording

Filing system must have proper recording for easy access and retrieval. There are a couple of filing record currently practiced.

2.3 Electronic Filing

Electronic filing secures personnel documents and various other important records into one centralized location with the necessary added values as needed. It is easily accessible to all approved personnel. If the record has been determined to be completed and additional paperwork is discovered, these documents should be added as appendix.

2.4 Paper Based System

For paper based system, filing of all documents should be part of a complete recording. If there are additional documents to be recorded, care should be taken to verify its status prior to inserting the document in the record.

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 6 Drpd / Of : 15
--------------------------	--------------------------------	--

2.5 Hybrid System

For hybrid system, the facility policies and procedures should determine which parts of the record will be paper based and the other parts are stored in a data repository. This policy should also determine whether or not additional documents should be added as paper based documents or scanned into the data repository. If documents are added to the electronic portion of the record, these should be added as appendix.

In data recording process there are a number of tagging manner is normally practiced, namely vital, important, useful, non-essential, etc.

2.6 Arrangement Scheme

There is no one arrangement scheme that is best for all records. Here are some basic suggestions on the major ones.

i) Chronological

The file is arranged by date. Most useful for small files and short life span records for easy deleting when no longer needed.

ii) Numeric

The file is arranged by number and is the simplest form. It is a serial arrangement beginning with the lowest number and proceeding. More complex systems can be used for large series. Best for case files of one type or another, permits and forms where numbers have already been assigned.

iii) Alphabetical Order

The file is arranged in alphabetical order from A to Z. This is the basic arrangement for most subject files. Alphabetical subject files are difficult to manage unless they are very focused, and the filing and identification of folders is consistent. Best use for small files or very consistent ones where the folder titles are easily determined, such as a file of all outgoing correspondence arranged by addressee.

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 7 Drpd / Of : 15
--------------------------	--------------------------------	--

iv) Alpha-numeric

The file is arranged according to combination letters and numbers. Whenever possible, the alphabetic and numeric parts of the identifier should mean something rather than being arbitrarily assigned.

2.7 Filing Tips

For safe keeping and easy accessibility of file the following tips may help.

- i) Keep the file plan as simple as possible.
- ii) Have program staff assist in developing the filing plan
- iii) Use color coding for files or special folders to make filing simpler
- iv) Do not use alpha-numeric filing scheme for permits that already have numbers.

2.8 Adopt Proper Document Retrieval

It is recommended that a process be in place to track the locations and holders of the record. This can be accomplished through a record check out system. A reasonable duration should be identified for which a record can be checked out.

2.9 Hybrid or Electronic System

Appropriate access levels should be given based on the needs of the operator to perform the job. In some confidential cases, the records would be locked and available as 'read-only', with limited to accessible personnel. There should be a limited number of operators with printing capabilities.

2.10 After Hours Retrieval – Paper Based System

Every facility should have a process in place for after office hour retrieval of records in case of an emergency. The supervisor should have keys to access the department and be trained in retrieval, the sign-out process, and other security measures. Department procedures should track who has keys to the department and documentation of their access on filing and retrieval procedures.

--------------------------	--------------------------------	--

3. Acquire And Sort Data

Data acquisition will capture data from an actual system and store the information in a format that can be easily retrieved. Another requirement is that data should be able to capture information programmatically or automatically, without any human intervention or guidance. In general there are seven elements or functions that must be in place for a structure in a data acquisition. If only a number of these elements are part of the system, then the module could be defined as components of data.

The seven elements are;

- Data collection
- Measurement
- Timing and triggering
- Real time clock
- System control
- Data communication and
- Data archives

Data is transferred via logic signal or analog forms based on the system application. Data hardware is usually interfaces between the signal and a computer. It could be in the form of modules that can be connected to computer ports.

Data sorting is a process of arranging data into meaningful order so that you can analyze it more effectively. For example, if you want to submit sales data by calendar month so that you can produce a graph of sales performance. You may explore to sort data as follows:

- Sort text data into alphabetical order
- Sort numeric data into numerical order
- Group sorted data to other levels
 - By area or locality
 - By month within a year

Sorting the data also makes job easier for analysis. For example, you might want to sort sales data from most profitable sales to least profitable sales to show the relative position of your company's best selling products.

You may discoverer more flexibility when sorting data within data. You can do this to many different levels. For example, you can sort by cities within a region.

On table worksheets, you can sort columns individually or in groups. For example, the figure below shows a worksheet sorted on one item (Region) in the order of low to high (i.e. A to Z).

No	Region	Department	Profit Sum (RM)
1	Central	Spare Parts	87,000.00
2		Lube Oil	78,000.00
3	East	Spare Parts	43,000.00
4	Coast	Lube Oil	34,000.00
5	Northern	Spare Parts	64,000.00
6	Region	Lube Oil	46,000.00

Figure 3: Table Sorted on Region

The following tips are recommended to be adhered to in effort to smoothen operation on data acquisition and sorting.

- Eliminate obstacles to make work easy
- Eliminate the mistakes of retrieving the wrong items
- Avoid unnecessary disturbance by the unwanted items
- Prevent accumulation of unnecessary items

4. Periodically Review Document

Document review is a process of identifying both grammatical and functional errors. This process is important to enhance the quality of the documents and very well fits its needs. At times, documents are often been ignored or forgotten without being reviewed.

The current challenges for document review are;

- No accountability of the documents
- Reviewed comments are not acceptable by the author
- Managers are not comfortable with track changes
- No proper document checklists available

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 10 Drpd / Of : 15
--------------------------	--------------------------------	---

4.1 Review Process

There are ways and mean in reviewing a document. The followings are suggested points and checklist for reference

- i) Examine the requirements and scope of the document
- ii) Check the release date, version and copyright trademark
- iii) Estimate required timing for completion
- iv) Print the document and do markings to identify changes
- v) Integrate changes from other reviewers
- vi) Submit the reviewed document to the author
- vii) Discuss on reviewed comments or edit if necessary

4.2 Review Checklist

The followings are steps to be taken for reviewing the work checklist

- Style and Format
 - Body text
 - Bullets
 - Consistency in numbering
 - Avoid blank space
- Update Field
 - Update the document
 - Check references
- Grammatical Errors
 - Run spell check
 - Check logical flow of contents
 - Check clarity and readability
 - Keep tenses consistent
 - Avoid passive statement
 - Remove abbreviations (e.g., i.e., viz)
 - Check common misuse wording (Its, It's, don't, can't)
 - Check for gender specifications
 - Check for numerical format (ONE to TEN should be in words and the rest are in numeric values)

5. Advantages

The accuracy of the document will benefit your organization and customers by offering the followings;

- Credible source of product
- Float up the unknown functionalities
- Benefit to corporate image of the organization

The stages for document review process are graphically shown in Figure 2.

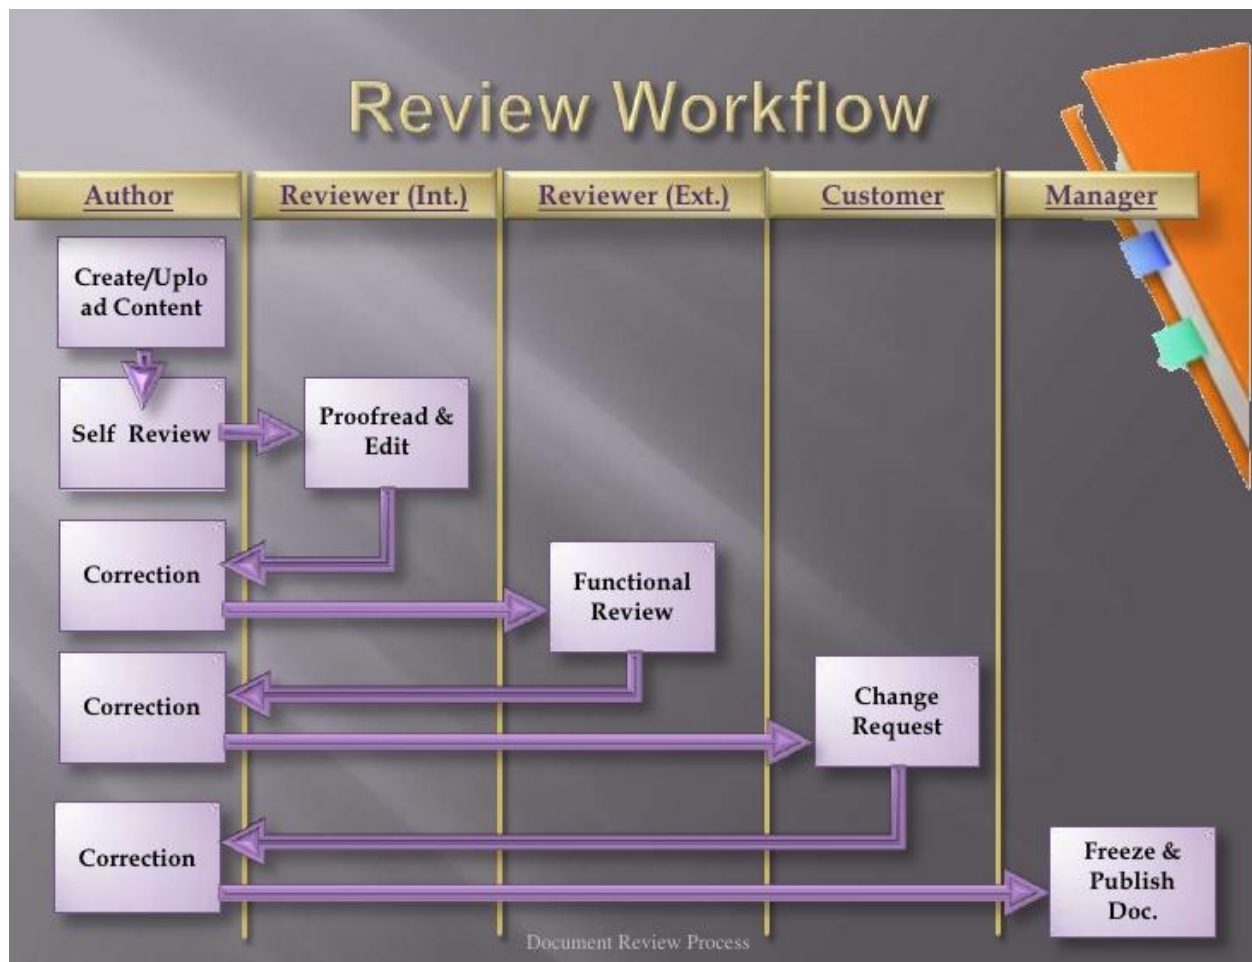

Figure 2: Stages of Document Review Process

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 12 Drpd / Of : 15
--------------------------	--------------------------------	---

6 Update Document Accordingly

Once you have indexed the content you need, you will want to start thinking about your strategy for dealing with changes to those documents. Among others there are two approaches in updating documents that have only partially changed.

- **Atomic Updates**

This approach allows changing only one or more fields of a document without having to re-index the entire document.

- **Optimistic Concurrency Or Optimistic Locking**

It is a feature of many databases, and allows conditional updating a document based on its version. This approach includes semantics and rules for how to deal with version matches or mismatches.

Atomic Updates and Optimistic Concurrency may be used as independent strategies for managing changes to documents, or they may be combined; you can use optimistic concurrency to conditionally apply an atomic update.

SOALAN / QUESTION

Q-1 Why does an organization put their internal documentation controls in place?
(15 markah/marks)

Q-2 The purpose of filings is to _____, _____ and _____ to
evidence of transactions over time in accordance with accountability and work done.
(3 markah/markah)

Q-3. Why filing system is designed and implemented within an organization?
(10 markah/marks)

Q-4 How do you separate locations for incomplete records?
(10 markah/marks)

NO. KOD / CODE NO	Z-009-4:2015-M01/P(4/7)	Mukasurat / Page : 14 Drpd / Of : 15
--------------------------	--------------------------------	---

Q-5 What are the current challenges for document review?

(12 markah/marks)

Q-6. State two approaches in updating documents with partial changes.

(10 markah/marks)
