TAJUK/TITLE:TRAINING COMPLIANCE

TUJUAN/PURPOSE:

The person who is competent in this CA shall be able to aware, understand and adhere to organisational policies and management system requirements. This information sheet is used to provide information on the training requirement program including related procedures and mechanism involved to measure the workers performance. The competent workers are amongst the provital factors which could positively impact

organisational performance and enable the organisation to gain a competitive advantage in a global marketplace.

PENERANGAN/INFORMATION:

1 Overview

In the contemporary era of globalisation, human being's intellectuality is improving day by day with innovations. The mentality of the human being is expanding because in modern era behavior of seeking knowledge and acquiring skills is on its top. There is a high influx of innovative skills and knowledge and every professional are keen to acquire those innovations, in order to make significant contribution in his field of expertise. These attributes of skills and knowledge plays vital role in professional and personal development of the intellectuals. The challenges associated with the changing nature of work and the workplace environment is as real for each and every professional.

Rapid change requires a skilled, knowledgeable workforce in organizations who are adaptive, flexible, and focused on the future. In modern era, well reputed and optimistic organizations are focusing on capacity building of their employees. Employers provide opportunities and platforms for training and development of the staff from time to time in order to endorse new knowledge and skills which enable workforce to adapt new environment in contemporary market.

Training is an essential tool with aims to facilitate the professionals as well as organizations in transferring new and essential skills prevailing in the current market to working force. It focuses on providing best service for ensuring best growth and career development of employees by coaching, and by helping employees achieve their personal goals by providing adequate training and encouragement of staff development, and educating about opportunities for growth which are currently prevailing in the market.

The effective training program should be designed to strengthen the managerial and organizational capacity required to perform effectively (to achieve set objectives) and efficiently (at optimum costs). In addition, it is also help to maximize the workforce performance and foster their capabilities.

NO. KOD ICODE NO.	Z-009-4:2015-M01/P(6/7)	Mukasurat / Page: 3 Drpd / of: 9
--------------------------	--------------------------------	-------------------------------------

The skills development achieved derived from training have many important benefits including:

- i) improved people productivity;
- ii) personal self development and growth;
- iii) shared concepts, models and frameworks with which to analyse, understand and plan for performance improvements;
- iv) increased co-operation, supportiveness and mutual trust;
- v) stronger connectedness across departments and management levels;
- vi) practical techniques and methods to implement a living vision, mission and value set;
- vii) skills and techniques to handle interface activities between important stakeholder groups.

2 Training procedure requirements

The training requirements, in particular, training procedures, trainer identification, trainee's assessment and proper training schedule apply to the new employees, retraining employees and re-verification of employee's performance.

2.1 Training procedures for employee

The employer provides training and education programs that are designed to give an employee the ability to perform the job duties to the best of his abilities. The employer must identify the proper and suitable methods for organizing training program. There are different types of training modes such as lecture, self-study packages, case-study, mentoring, course training, coaching, self-help study groups and computer aided training. The training methods such as verbal instruction, written instruction, performance modeling, performance practice and feedback shall be introduced to ensure the effective learning of the employee during the training session. Besides the methods of training, allocation of resources are the key activities need to be considered. The employer must identify the available resources such as audio visual aids, course materials, qualified trainers and classroom facilities to conduct a series of required training programs. The effective training which complies with relevant requirements is imperative to ensure the

---------------------------------	--------------------------------	-------------------------------------

employee is competent and skilled to carry out the job/task once the training is complete to maximize their productivity.

2.2 Trainer's identification

While choosing the suitable training methods, the trainer or team leader must take into account some of the key aspects such as the culture of the organisation, learning style, competency or maturity level of the members and the difficulty level of the subjects. The team leader or trainer must be flexible in choosing the appropriate methods of training based on the specific requirement.

The selection of trainer should be based on the ability of the trainer to understand the role and function of that training as a management strategy to help the organisation achieve its mission, and know how competency-based training which can promote "best practice" throughout the service system.

The trainer shall understands the importance of maintaining a professional demeanor in the training environment, including maintaining standards for dress, adhering to pre-set time frames for the training and being well organized and fully prepared for the training.

2.3 Training assessment

Most organisations use an evaluation system to ensure that workers are meeting necessary job standards. Once the training session is complete, the employee should be tested on how well the understanding on the training materials and its concepts. If the job involves working with machinery, the testing must reflect the employee's ability to use the equipment safely. These tests can be written assignments or hands-on implementation of what was taught in the training session.

After the employee has been trained and performed duties for a certain period of time, the evaluation skills should be assessed. Evaluations provide an employee with feedback on the job performance whether he/she is properly implementing company procedures in which he/she was trained. If the employee is not following his/her training, he/she will have to be retrained on certain procedure.

2.4 Training schedule

Training duration may take a couple of days or couple of weeks depending on the job types and the complexity of the subject matters. Periodically, the training sessions should

also be evaluated to ensure that the employees are effective and provide the ability to perform the required tasks.

3 Performance management

Performance metrics are a critical ingredient of performance management, a discipline that aligns performance with strategy. Performance management harnesses information technology to monitor the execution of organisational strategy and help to achieve the goals. *Figure 1* shows the performance management attributed to a four-step virtuous cycle that involves creating strategy and plans, monitoring the execution of those plans as well as adjusting activity and objectives to achieve strategic goals. This four-step wheel revolves around integrated data and metrics, which provide a measurement framework to gauge the effectiveness of strategic and management processes.

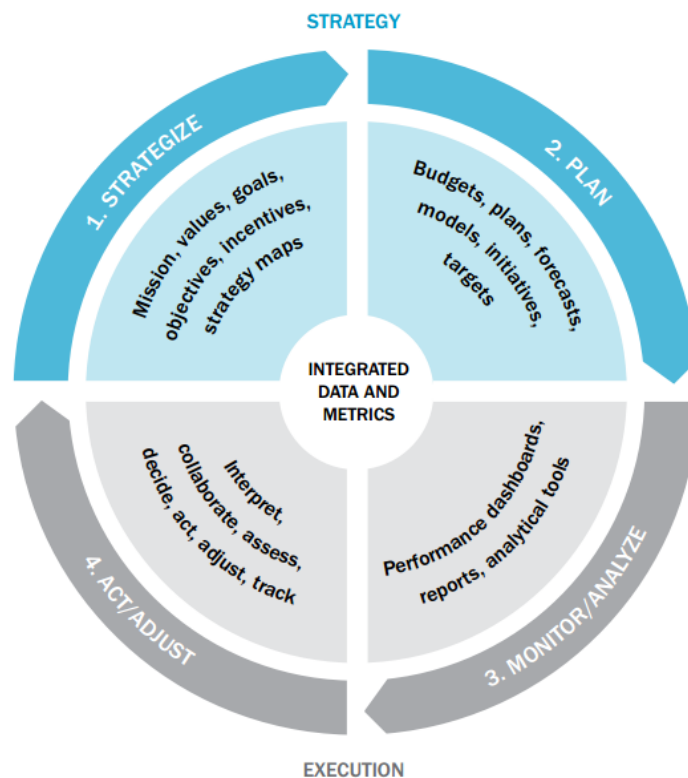

Figure 1: The performance management cycle.

A performance management system (PMS) supports the *Figure 1* virtuous cycle. The PMS have positive impact if it is properly organized and implemented in the organisation. Basically, the PMS is designed to address the needs of an organisation to measure and monitor employee's performance on continuous basis and to make the system work well.

3.1 Key Performance Indicators

One of the mechanisms to measure the organisational performance management is the Key Performance Indicators (KPIs). A KPI embodies a strategic objective and measures performance against a goal. The goals attached to a KPI are multi dimensional: they have ranges that are encoded in software, a time frame by which the goals must be achieved and a benchmark against which the goals are compared as shown in *Table 1*.

Table 1: The elements of a KPI

Strategy	KPIs embody a strategic objective.
Targets	KPIs measure performance against specific targets. Targets are defined in strategic, planning or budget sessions and can take different forms (e.g., achievement, reduction, absolute, zero).
Ranges	Targets have ranges of performance (e.g., above, on, or below target).
Encodings	Ranges are encoded by enabling the visual display of performance (e.g., green, yellow, red). Encodings can be based on percentages or more complex rules.
Time frames	Targets are assigned time frames by which they must be accomplished. A time frame is often divided into smaller intervals to provide mileposts of performance along the way.
Benchmarks	Targets are measured against a baseline or benchmark. The previous year's results often serve as a benchmark.

3.2 Types of KPIs

There are two fundamental types of KPIs:

i. Outcomes

Outcome KPIs known as lagging indicators which measure the output of past activity. Examples include revenues, margins, return on equity, customer satisfaction and employee retention.

ii. Drivers

---------------------------------	--------------------------------	-------------------------------------

Driver KPIs known as leading indicators or value drivers which measure activities that have a significant impact on outcome KPIs. These KPIs measure activity in its current state or a future state.

The latter is more powerful, since it gives individuals and their managers more time to adjust behavior to influence a desired outcome.

---------------------------------	--------------------------------	-------------------------------------

SOALAN/QUESTION:

1. What is the mechanism to be introduced to new employee in order to adhere to organisational policies and procedures?
2. Explain how the training compliance could shape patterns of workers productivity in the workplace?
3. How effective is the periodic training implementation to the success of organisation?
4. How competent workers affect the productivity of the company?
5. What are Key Performance Indicators (KPIs)? Explain the correlation between the Performance Management System and KPIs?
6. What are the components of the KPI?
