PENERANGAN / INFORMATION

1. Overview

Relationship management is a strategy employed by an organization in which a continuous level of engagement is maintained between the organization and its audience. It is a focus of the financial and investing industries as a way to identify potential cross-sales of products and services.

The relationship management can be between a business and its customers or between a business and other businesses. As with any other type of important business relationship, the intent of managing how a supplier performs is to ensure the highest possible quality of goods; on time, and within budget.

1.1 Supplier Relationship Management (SRM)

This term is used to describe a process by which a business interacts and conducts business with a company that furnishes goods that are either products or services.

i) Customer Relationship Management (CRM)

It describes the strategy that a company uses to handle customer interactions. One example of a common CRM strategy is the rewards card program offered by supermarkets. The store gives its customers a free card with certain benefits when they swipe the card during checkout. In return, the supermarket tracks everything the customer buys and allows the store to create an extremely detailed customer profile based on his or her purchasing habits.

ii) Client Relationship Management

It is a mean to develop good rapport between a client and the supplier or service provider that will reduce tense relationship between them. It helps to reduce the tension and build confidence in clients thrust. Tension arises with clients when expectations are not met in the eyes of the client.

--------------------------	--------------------------------	--

2. Enhance Interpersonal Conflict Resolution

Whenever there are two or more people come together, there is tendency to be in conflict. In conflict resolutions, you will learn crucial conflict management skill, including dealing with anger and using the agreement frame. Dealing with conflict is important for every organization irrespective of its size. If it is left unattended or not being properly resolved, it can lead to production lost, absenteeism, wear and tear and even law suits.

Conflict is complicated subject. Not many people are possibly remember a long steps of things to do and not to do during a conflict conversation. So, in this short lesson we try to focus our energy and attention on places most likelihood of shifting the conflict to a better position.

In interpersonal conflict situations involving relationships that you want or need to continue, the followings are usually the primary goals for everyone involved. There may be some other points, but these are the ones people return to again and again when mediating, coaching or transforming a workplace or personal conflict.

- Alleviate ongoing tension so that the personal relationship is more joyful or the professional relationship returns to be productive.
- Handle yourself in a way you can feel good about, so that no further damage on the relationship and, if at work, fosters your career.
- See if you can sort out the primary dispute and, if not, figure out how to move forward without resolution. In order to achieve these goals, follow the three outlined below as the interpersonal conflict fundamentals.

2.2 Manage Your Own Response

The only person you can truly manage during conflict is yourself. During conflict conversations, many people focus attention on the other's behavior, on the other's transgressions, and on what they demand the other person start or stop doing. So let's stop doing what isn't working and disempowering yourself in the process. When you make the fix to a conflict entirely the other person's job, you hand all power to them for how the future unfolds.

The way you act in conflict is heavily influenced by the way you think about conflict and its resolutions, by the narrative you tell yourself and others about the situation. By choosing a certain kind of narrative, you create opportunity to change the conflict and its impact on the relationship. The narrative you choose to tell yourself and others about the conflict will determine your words and actions.

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 4 Drpd / of : 18
-------------------	-------------------------	--

What does it mean to manage your own response and choose the right kind of narrative? Use these guidelines to figure out what kind of response will serve you best.

- i) Work to understand what it is about the other person's behavior that is getting under your skin. Understanding that will give you the key to neutralizing your 'inner lizard'.
- ii) Identify 'stoppers', quick mechanisms to help you stop doing something you know won't serve you well but is still a habit that's hard to break. Stoppers are a mental shortcut to help you bridge the gap between what you know and what you actually do.
- iii) Notice the narratives you tell yourself and others about this conflict. Is it helping you or blinding you to a fuller understanding of the problem? Stop blaming. It wastes energy, escalates conflict, sidetracks the conversation and achieves little beyond feeding your inner lizard's bad behavior.

Note

Just remember this when talking about personal conflict issue, *"Every person you fight with has many other people in his life with whom he gets along quite well. You cannot look at a person who seems difficult to you without also looking at yourself"*. – Jeffrey Kottler, psychologist

2.3 Do your part to make collaborative problem solving feasible

When there is an ongoing period of tension, every little transgression registers, just like a minor scrape on a scab can start it bleeding again. Relationships that took a long while to become tense and unhappy will take a while to heal. One of your primary tasks is to create space for that to occur and to protect the 'between' from further damage.

Here are some effective ways for protecting the relationship the best you can from increased tension while you work to sort out the problems that caused it.

- i) If a conversation gets tense or begins to go downhill in another way, stop until you have your balance back. Proceed when you have lost your cool serves no one well.
- ii) Use door openers to initiate conversation about the tension, to invite the other person to understand it with you. Do not focus on fixing first; focus on understanding first.
- iii) When you do have to confront a problem, do your part to increase the odds the other person will want to stay in conversation with you. The other person(s) can

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 5 Drpd / of : 18
-------------------	-------------------------	--

choose to leave the conversation whenever they wish; do your best to conduct yourself in a way that makes them more likely to stay. If not then revert to paragraph 'a' abovementioned.

- iv) If you're implementing some new behaviors of your own, practice them during low-stakes conversations, not ones where emotions are escalated. You want to give yourself room to grow into a new habit before putting it to the hardest test.

2.4 Focus Your Energy Where It Really Matters

As noted above, when things are tense it can seem like every move by you or the other becomes yet another nail in the relationship's coffin. In part, it's because you're stuck in a reflexive loop. In part it's because when you focus on problems, that's what you see, just like hitting a pothole you have been watching in order to avoid.

You cannot talk your way out of something you behaved your way into. You have to behave your way out of it. – Doug Conant, CEO, Campbell Soup

In general, you may require for interpersonal conflict that is evolved into an ongoing state of tension is this sequence:

- i) Put most energy to reducing the tension by emphasizing (i) and (ii) above. Changing how you engage the conflict will go a long way to helping you later to address the differences that initiated it.
- ii) Get very clear on what is most important to you in terms of the relationship on problems / differences you want to sort out. This is soul-searching work and yours alone to do. Until you know what is most important, you risk solving the wrong problem.
- iii) Work on lesser problems after the most important ones are sorted out, if at all. Here are some tips for deciding whether or not to confront a problem. Teach yourself how to let go of the rest.

2.5 Build a Stronger Relationship at Work Or Home

Many sectors, business partners, couples and individuals prevent conflict from leaving debris in the relationship and instead use it to deepen personal and professional bonds. In order to achieve that we need to develop an innovative, transformative process that make people change even on the most complex and stubborn matters into a better relationships and get peace of mind.

-------------------	-------------------------	--

3. Promote Empathy

3.1 What is Empathy

Empathy is the capacity to understand or feel what another person is experiencing from within the other person's frame of reference; that is the capacity to place oneself in another's shoes.

Compassion and sympathy are two terms that many associate with empathy, but all three of these terms are unique. Compassion is an emotion we feel when others are in need, which motivates us to help them. Sympathy is a feeling of care and understanding for someone in need.

Empathy is distinct from sympathy, pity, and emotional contagion. Sympathy or empathic concern is the feeling of compassion or concern for another, the wish to see them better off or happier. Pity is feeling that another is in trouble and in need of help as they cannot fix their problems themselves, often described as 'feeling sorry' for someone. Emotional contagion is when a person imitatively catches the emotions that others are showing without necessarily recognizing this is happening.

Empathy leads to sympathy by definition unlike the over-aroused emotional response that turns into personal distress and causes a turning-away from another's distress.

In empathy we feel what we believe are the emotions of another, which makes it both affective and cognitive by most psychologists. In this sense, arousal and empathy promote pro-social behavior as we accommodate each other to feel similar emotions. Measures of empathy show that mirror neurons are activated during arousal of sympathetic responses and prolonged activation shows increased probability to help others.

3.2 Components of Empathy

Empathy can be divided into two major components.

i) Affective Empathy

Also known as emotional empathy is the capacity to respond with an appropriate emotion to another's mental states. The ability to empathize emotionally is supposed to be based on emotional contagion being affected by another's emotional or arousal state.

Affective empathy can be subdivided into the following scales:

- Empathic Concern

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 7 Drpd / of : 18
-------------------	-------------------------	--

Sympathy and compassion for others in response to their suffering.

- **Personal Distress**

Self-centered feelings of discomfort and anxiety in response to another's suffering. There is no consensus regarding whether personal distress is a basic form of empathy or instead does not constitute empathy.

i) **Cognitive Empathy**

It is the capacity to understand another's perspective or mental state. The terms cognitive empathy and theory of mind are often used synonymously, but due to a lack of studies comparing theory of mind with types of empathy, it is unclear whether these are equivalent.

Cognitive empathy can be subdivided into the following scales.

a. **Perspective Taking**

The tendency to spontaneously adopt others' psychological perspectives.

b. **Fantasy**

The tendency to identify with fictional characters.

4. **Provide Motivation**

Motivation is an employee's intrinsic enthusiasm about and drive to accomplish activities related to work. Motivation is that internal drive that causes an individual to decide on action.

An individual's motivation is influenced by biological, intellectual, social and emotional factors. As such, motivation is a complex, not easily defined, intrinsic driving force that can also be influenced by external factors.

4.1 **Three Motivation Theories**

In general, currently most organizational management make use of three motivational theories.

) **Cognitive Dissonance Theory**

This theory involves being motivated to make a decision of some kind based on the fact that doing one thing or being a certain way feels uncomfortable. People do not like to feel uncomfortable. They hate the feelings of dissonance. If a person feels that he stands out for some reasons, it makes him feel awkward. In order to reduce the stress of that situation, that person is motivated to formulate

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 8 Drpd / of : 18
--------------------------	--------------------------------	--

some kind of changes. It might be in the fashion role that he is wearing or his hair styles or even intentionally getting his performance or life styles changed to better fit in.

ii) Endowed Progress Effect

In real life, any perception of progress is motivating in itself. If a person perceives that he is making progress toward a goal he set, he is motivated to continue working at it. Conversely, if no progress is perceived, of course he is likely to abandon his efforts. Take an example in teaching sector. Students could be motivated during tests or assignment slots. Say, for certain numbers of test or assignment questions, just simply throw in a ridiculously easy question. The student has no problem in answering it, they feel affirmed in their efforts, they see a quickly completed problem, and they feel motivated to continue working on it.

iii) Extrinsic Motivation

People are motivated to do something because there are some kinds of tangible reward at the end of it. Most people do it for the reward. Nevertheless, there are cases whereby people do it for fun. A person could say that he does something because he enjoys doing it. That is not extrinsic motivation. People go to work because they get paid. Doing something because you get rewarded at the end of it is extrinsic. There is a tangible reward and it works on all kinds of people. It works really well with kids. Extrinsic motivation should be on continuous effort so that it would not becoming defaulted. Trained animals get motivated as they get rewarded (food) at the end of their acts is extrinsic motivation.

4.2 Motivation Without Monetary Rewards

There are eight ways a leader can motivate employees without monetary rewards. Most successful entrepreneurs will tell you that their primary motivation is to 'change the world' and to build something lasting, not to make a lot of money. The conventional wisdom is that employees work for money above anything else.

Some people believe that non-cash motivators may be more effective in the long term than financial incentives. There are people who believe that motivation is strongly tailored to leadership. The employees value having strong leaders, who incent them to do their best, just as much if not more than monetary rewards. For action we need to be trained from what we rebuild employees' morale following tough economic times, with limited budgets:

i) Energize Your Team

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 9 Drpd / of : 18
--------------------------	--------------------------------	--

Instead of being the type of leader who sucks the energy away from others, resolve to be the kind of leader who strives to bring passion and positive energy at workplace. Your employees have just helped you pull the company through one bad economic period. It is time for them to have a source of positive energy.

ii) More to Life Than Work

Great leaders have deep reserves of physical, spiritual, and emotional energy, and that energy is usually fuelled by a strong and supportive relationship with the people they love, regular exercise, a healthy lifestyle, and setting aside time for reflection.

iii) Priority to Employees

No organization is better than the people who run it. The fact is that you are in the people business; hiring, training, and managing people to deliver the product or service you provide. If the people are the engine of your success, to be a great leader you need to attend to your people with a laser-like focus.

iv) Act With Integrity

When there are reports publicly exposing the stories of leaders who have acted inappropriately and have gone against the best interests of the employees, showing your employees that you value integrity can help motivate them and create a sense of pride for your organization.

v) Be a Great Communicator

Leadership is influencing others. It cannot be achieved without effective communication. If you are struggling with communicating to your employees, first work on your ability to influence individuals by choosing words that are impactful to carry your message. Then you need to figure out how to communicate to a larger audience.

vi) Be a Great Listener

The most effective leaders are those who can spare their time to listen. They are not merely just listening to their team members' words but also to the priceless hidden meaning between the lines. Remember that during good times and bad, sometimes the employees just need someone to talk to. Communicate to them that you are always waiting with open ears.

vii) Be a Problem Solver

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 10 Drpd / of : 18
--------------------------	--------------------------------	---

Post a sign on your office door that reads, “Don’t Bring Me Problems. Bring Me Solutions.” Then set about the task of guiding everyone in your team toward the goal of becoming a top-notch problem solver during crucial period.

The fundamentals of leadership do not change between good times and bad. But when money is in short supply, these principles can be the difference between success and failure. Now is the time to start motivating your employees by applying these principles, and your team will lead you through the hard times

5. Demonstrate Initiative Behavior

Behaviour is what humans do. It is observable and measurable. Whether it is walk from one place to another or to crack our knuckles, behaviour serves some functions or the other.

Applied Behaviour Analysis, the research based approach to modifying behaviour, seeks to find the function of an inappropriate behaviour in order to find a replacement behaviour to replace it. Every behaviour serves some functions, and provides a consequence or reinforcement for the behaviour.

Reinforcement is the means by which behavior is increased and also known as consequences. Positive reinforcement adds something that will make it more likely the behavior will occur. Negative reinforcement is when something is removed and it is more likely to continue.

5.1 Management Initiative Behavior

Employee core competencies are an essential part of the performance agreement. The behavioral characteristics for each of the competencies are a focal point of conversations on progress and are monitored throughout the year by superiors. Deficiencies in any of these indicators can point to coaching, training or other learning opportunities that employees may need in order to improve.

The followings are some typical behavioral criteria. Nevertheless this should not be construed as a complete list.

i) Showing Initiative and Being Action-Oriented

The following point indicatives are for initiatives behavior requirements.

- Keep up to date on team goals, work processes and performance objectives.
- Translate direction into concrete work activities, making the most of available time and resources.

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 11 Drpd / of : 18
--------------------------	--------------------------------	---

- Maintain constructive attitude in facing changes, setbacks or stressful situations, and remain open to new solutions or approaches.
 - Communicate ideas, views and concerns effectively and respectfully, and actively participating in exchanging ideas with others.
 - Identify early warning signs of potential problems, and alerting the superiors and others as needed.
- ii) Working Effectively With Others
- Share information with work colleagues.
 - Listen actively to the views of others, and respect, consider and incorporate them.
 - Recognize the contributions and celebrate the successes of others.
 - Work collaboratively and relate effectively to others, and embrace and value diversity.
 - Demonstrate and understand of the roles, responsibilities and workloads of colleagues, and willing to replace personal needs with those of other team members.
 - Elicit trust, particularly by following through on commitments.
 - Deal proactively with interpersonal or personal matters that could affect their performance. Manage own work-life balance and respecting that of others.
- iii) Demonstrating integrity and respect
- Behave consistently with the Values and Ethics Code.
 - Discuss ethical concerns with their superiors or peers and when necessary, seeking out and using appropriate disclosure procedures.
 - Work in a manner that reflects a commitment to client service excellence.
 - Actively contribute to workplace well-being and a safe, healthy and respectful workplace.
 - Support and value diversity and multilingualism.
 - Act with transparency and fairness.
 - Demonstrate respect for the organizational assets and resources and use them responsibly including understanding and applying the policies and rules and regulations.

--------------------------	--------------------------------	---

5.2 Management Behavior Solution

i) The Risk Management Process

Risk Management is defined as a systematic application of management policies, procedures and practices to the tasks of establishing the context, identifying, analysing, assessing, treating, monitoring and communicating. Risk management can be applied to all levels of an organisation, in both the strategic and operational contexts, to specific projects, decisions and recognised risk areas.

It is an iterative process that, with each cycle, can contribute progressively to organisational improvement by providing management with a greater insight into risks and their impact.

Risk is defined as the chance of something to happen that will have an impact on objectives. It is, therefore, important to understand what the objectives of an organisation, departments, sections and work unit or your position are prior to attempting to analyse the risks.

Risk analysis is best done in a group with each member of the group having a good understanding of the tasks and objectives of the area being analysed.

ii) Identify the Risks

As a group, list the things that might inhibit your ability to meet your objectives. You can even look at the things that would actually enhance your ability to meet those objectives eg. a fund-raising commercial opportunity. These are the risks that you face eg. loss of a key team member; prolonged IT network outage, delayed provision of important information by another work unit/individual, failure to seize a commercial opportunity etc.

iii) Identify the Causes

Try to identify what might cause these things to occur eg. the key team member might be disillusioned with his/her position, might be head hunted to go elsewhere; the person upon whom you are relying for information might be very busy, going on leave or notoriously slow in supplying such data; the supervisor required to approve the commercial undertaking might be risk averse and need extra convincing before taking the risk etc.

iv) Identify the Controls

Identify all the things (controls) that you have in place that are aimed at reducing the likelihood of your risks from happening in the first place and, if they do happen, what you have in place to reduce their impact (consequence) eg. providing a

NO. KOD / CODE NO	Z-009-4:2015-M03/P(2/3)	Mukasurat / Page : 13 Drpd / of : 18
--------------------------	--------------------------------	---

friendly work environment for your team; multi-skill across the team to reduce the reliance on one person; stress the need for the required information to be supplied in a timely manner; send a reminder before the deadline; provide additional information to the supervisor before he/she asks for it etc.

v) **Establish Your Likelihood and Consequence Descriptors**

Remembering that these depend upon the context of your analysis ie. if your analysis relates to your work unit, any financial loss or loss of a key staff member, for example, will have a greater impact on that work unit than it will have on the organisation as a whole so those descriptors used for the whole-of-the organisation strategic context will generally not be appropriate for the department or other work unit or the individual eg. a loss of RM 1.2 millions might be considered insignificant to the company, but it could very well be catastrophic to your work unit. This parameters need to be established in consultation with the head of work unit.

vi) **Establish Your Risk Rating Descriptors**

What is meant by a Low, Moderate, High or Extreme Risk needs to be decided ahead of time. Because these are more generic in terminology though, you might find that the company's Strategic Risk Rating Descriptors are applicable.

vii) **Add Other Controls**

Generally speaking, any risk that is rated as High or Extreme should have additional controls applied to it in order to reduce it to an acceptable level. What the appropriate additional controls might be, whether they can be afforded, what priority might be placed on them etc is something for the group to determine in consultation with the Head of the work unit, who ideally, should be a member of the group doing the analysis in the first place.

viii) **Make a Decision**

Once the above process is completed, if there are still some risks that are rated as High or Extreme, a decision has to be made as to whether the activity will go ahead. There will be occasions when the risks are higher than preferred but there may be nothing more that can be done to mitigate that risk ie. they are out of the control of the work unit but the activity must still be carried out. In such situations, monitoring the circumstances and regular review is essential.

x) **Monitor and Review**

The monitoring of all risks and regular review of the unit's risk profile is an essential element for a successful risk management program.
