TAJUK/TITLE : RESULT ORIENTED PRACTICES

TUJUAN/PURPOSE :

The purpose of this Information Sheet is to describe the requirements to demonstrate established standard work certification, deliver constructive criticism and handle work performance discussion process in order to adhere to result oriented practices in work environment.

NO. KOD / CODE NO.	Z-009-04:2015-M04/P(4/5)	Muka Surat / Page : Drpd / of : 10
--------------------	--------------------------	---------------------------------------

PENERANGAN/INFORMATION :

1. Result Oriented Practices

1.1 Introduction

Result oriented practices explained about desire to achieve results that has been set or even challenging goals.

1.2 Result Oriented Practices

Key practices to achieve result oriented goals are;

- i) Identifies and meets with appropriate parties to develop an understanding of the project or program goals and desired outcomes.
- ii) Develops and utilizes measures to assess goal attainment and outcome achievement.
- iii) Utilizes tools and techniques to ensure projects remain on target and on budget.
- iv) Demonstrates a flexible approach to work and projects to achieve cost-savings and to attain goals.
- v) Effectively engages team members' participation in achieving goals by identifying strengths of members and assigning tasks based on strengths

1.3 Advantages

Results-oriented team will bring a lot of advantages to the organization such as;

- i) Improve Teamwork across organization's units and locations. It help teams to learn on how to overcome issues arising from functional, cultural, geographic and operational differences.
- ii) Build a more collaborative culture within the teams. Help teams find and eliminate the barriers to creative problem solving, build more effective communication systems and practices, and enjoy stronger relationships and greater trust.

NO. KOD / CODE NO.	Z-009-04:2015-M04/P(4/5)	Muka Surat / Page : Drpd / of : 10
---------------------------	---------------------------------	---

- iii) Get the right mix of skills in the teams. Help team leaders deploy their resources more effectively to tap into hidden potential, more closely match people and skills with roles and responsibilities, and lessen the dependence of their team's effectiveness on particular members of the team.
- iv) Sharpen teams' procedures and work flows. Help teams to recognize that how they work is as important as who does the work, and to take steps to ensure that they are backed up by efficient and effective systems, processes and procedures.
- v) Focus teams on measurable strategic outcomes. Help teams to pursue clearly defined objectives and to consistently deliver superior results that are aligned with the organization's goals.

2. Demonstrate Established Work Certification Standard

2.1 Work Certification Standard

- i) The following are reasons for company to acquire their work certification:
 - a) Meet Customer Requirement

Many companies want ISO 9001 certification just to satisfy one customer requirement. The customer states that it will only do business with vendors that are certified as ISO 9001 compliant, so to get (or keep) the business they need that certification.
 - b) Get more revenue and business from new customers

Once you earn your ISO 9001 certification, you can advertise your quality certification and respond to requests for quotes (RFQ) from companies that make ISO 9001 certification a "must-have". ISO 9001 certification can open up new markets you were virtually unable to do business with before your certification.
 - c) Improve company and product quality.

A quality management system standard is all about quality so, of course, one result of adopting a Quality Management System should be an improved level of quality for the entire organization —

NO. KOD / CODE NO.	Z-009-04:2015-M04/P(4/5)	Muka Surat / Page : Drpd / of : 10
--------------------	--------------------------	---------------------------------------

every process, and every product. There are many definitions of “quality”, but Philip Crosby and Joseph Juran provide two of the best. Crosby defined it as “conformance to requirements”; Juran called it “fitness for use”. A well-designed, effectively implemented ISO 9001 Quality Management System will put your company on the Road to Quality.

d) Increase customer satisfaction with your products

Quality means whatever you produce will work as your customers expect. You will meet not only their stated requirements but also their implied requirements, too. Quality also means far fewer complaints and doing a better job of resolving those you do. If your quality management system is working correctly, you should know what your customers expect and you should be providing it, resulting in increased customer satisfaction.

e) Describe, understand, and communicate your company processes.

The ISO 9001 Quality Management System standard requires that you identify and describe your processes using business metrics, the purpose of which is to better manage and control your business processes. Quality objectives form the centre of your system. Metrics are used to understand and communicate your system’s performance relative to your quality objectives. If you make an honest attempt to conform to the requirements of getting ISO 9001 certification, you’ll learn more about your business.

f) Develop a professional culture and better employee morale.

Implementing an ISO 9001 Quality Management System (QMS) can empower employees. Your QMS will provide them with clear expectations (quality objectives and job descriptions), the tools to do their job (procedures and work instructions), and prompt, actionable feedback on their performance (process metrics). As a result, it will improve company culture and a more professional staff.

--------------------	--------------------------	---------------------------------------

g) Improve the consistency of your operations.

Reducing the variation in your processes is the definition of consistency. Is your customer better served by you supplying them with a consistent product in term of same dimensions, same weight, same tolerances, same output every time or by your products being unpredictable and “all over the place”?

Of course, they won't accept variation, and neither should you! And how do you decrease variation? Increase control of your processes! Control comes from having a clear target to shoot for objective, collecting data on the process metrics, and understanding how to adjust the process procedures and work instructions to maintain the target output. If your ISO 9001 QMS is working, you should be increasing operational output and product consistency.

h) Focus management and employees ISO 9001 certification.

We've discussed quality objectives, metrics, and procedures used within an ISO 9001 Quality Management System. Having the right objectives, metrics, and procedures, management and employees should be able to focus better on what's important.

The ISO 9001 QMS has a way to ensure the company stays focused, and that's quality auditing. Internal audits, registration and surveillance audits, and self-process audits. ISO 9001 certification requires that the company periodically audit its quality processes. Regular process audits and as-needed audits, when done correctly, provide the objective feedback needed to correct any deviations from the quality path and keep the company focused on its goals.

i) Improve efficiency, reduce waste and save money.

An ISO 9001 Quality Management System isn't perfect; no process and no one is perfect. A well-run QMS does enable your company to approach perfection. As your processes improve, become more consistent and you achieve your target objectives with greater regularity you will see more tangible results and will reduce process waste.

NO. KOD / CODE NO.	Z-009-04:2015-M04/P(4/5)	Muka Surat / Page : Drpd / of : 10
--------------------	--------------------------	---------------------------------------

Waste will result from poor quality and inefficiency. More often inefficiency results from variation and inconsistent processes. Reducing variation, improve consistency and less waste will improve company's profit.

- i) Achieve international quality recognition.

ISO 9001 is a worldwide standard administered by the International Organization for Standardization (ISO), based in Switzerland. ISO 9001 is currently in use by close to one million organizations around the world. It is truly a worldwide standard for quality. Obtaining ISO 9001 certification will puts your company in a prestige quality status.

2.2 Benefits From Standard Work Certification

- i) Each standard supports its own benefits within every industry, however the common benefits across the certifications include: widened market potential, compliance to procurement tenders, improved efficiency and cost savings, higher level of customer service, and therefore satisfaction, and heightened staff moral and motivation. By having a recognized management standard it tells your customers that you are serious about their needs. Here are some of the standards that are available;
 - a) ISO 9001 is a quality management system, implementing a systematic and process driven approach to managing your business.
 - b) ISO 14001 is an environmental management system for controlling the aspects of your business that have a significant impact on the environment.
 - c) BS EN 15713 is a framework of key conditions to be adhered to for companies that destroy confidential information on behalf of their customers; the security of this information being integral to this.
 - d) BS OHSAS 18001 is a health and safety management system for controlling and monitoring risks that can arise from the company's day to day activities.

NO. KOD / CODE NO.	Z-009-04:2015-M04/P(4/5)	Muka Surat / Page : Drpd / of : 10
---------------------------	---------------------------------	---

- e) ISO 27001 is an information security management system for effectively managed risks to the security of your company's confidential information.

3. Constructive Criticism And Suggestion Delivery

3.1 Constructive criticism is a communication technique intended to identify and find solutions to problems in a positive way. Anyone can use the strategy, although professionals can provide more thorough analysis in many cases. It usually applies to work a person does, or to an individual's behaviour. People respond to the method differently based on their own experiences, preferences and psychology, but a good, well-timed delivery can make a person more receptive to the message.

3.2 Purpose Of Constructive Criticism

Unlike general criticism that is negative, a constructive analysis, as the title implies, builds someone up. It identifies at least one problem and gets a person to think about what caused the issue. It also invites her to find possible solutions to whatever is going wrong. By promoting problem solving and self-improvement, it advances a person to the next level of behaviour or achievement.

3.3 Delivery Method

This type of analysis often is associated broadly with work a person does, especially in fields such as art. People also use it when they look at behaviour. Although experts in a particular area might be able to give a more thorough analysis, it is not necessary to be a professional to apply this technique. Friends and parents, for example, use it to guide loved ones through tough periods or help them develop certain behaviours or skill sets.

4. Work Performance Discussion Process

4.1 Purpose

The purpose of the work performance discussion is for the supervisor and the employee to;

- i) Review current performance
- ii) Review performance of the past year
- iii) Document and highlight past accomplishments
- iv) Identify areas for improvement
- v) Identify work goals and performance standards for the coming year
- vi) Initiate professional development opportunities

4.2 Work Performance Discussion Process

i) Annual Review Requirement

Supervisors are required to conduct annual progress reviews with regular staff exempt and non-exempt employees who report to them. The review period covers a calendar year and should be completed by any specified of the new calendar year.

ii) Setting a Review Appointment

Inform the employee approximately two weeks in advance of your intention to review his/her performance, and schedule a day and time for the review. Make sure the review takes place on this date unless there are extenuating circumstances.

iii) Employee Self-Assessment

It is highly recommended to ask the employee to complete a self-assessment for the supervisor prior to the supervisor's evaluation. If the supervisor anticipates performance issues, discuss those with the employee prior to writing the performance review.

NO. KOD / CODE NO.	Z-009-04:2015-M04/P(4/5)	Muka Surat / Page : Drpd / of : 10
---------------------------	---------------------------------	---

iv) Performance Review Documents

Supervisors will complete the appropriate Performance Review documents. The performance review documents, including instructions for each, may be found on the Human Resources website. The Performance Review Summary Form should be completed on every employee. Department directors or heads should then review and sign the performance documents prior to the actual review taking place.

v) The Performance Review Meeting

Make sure the review meeting is held in a confidential manner behind closed doors. Put the employee at ease. Review the ratings and encourage the employee to comment on past performance, accomplishments or obstacles to progress and future goals. Keep the evaluation work-related. Do not address personal traits or personal issues. Interpersonal communication and behavior may be discussed, but they must have a demonstrated effect on the employee's work and/or other employees' abilities to get their jobs done. Take a break in the discussion for reconvening at a later date if the discussion is unproductive.
