PUSAT PENTADBIRAN KERAJAAN PERSEKUTUAN
62530 PUTRAJAYA**

KOD DAN NAMA PUSAT BERTAULIAH	
SOALAN PENILAIAN PENGETAHUAN (SUBJEKTIF)	
KOD UNIT CORE ABILITY	Z-009-4:2015 CA05
NAMA UNIT ABILITY	STRATEGIC THINKING SKILL
NAMA CALON	
NO.KAD PENGENALAN	
MASA	
TARIKH	
MARKAH	

Arahan kepada calon:

1. Tulis nama dan nombor kad pengenalan calon pada ruangan yang disediakan;
2. Calon tidak dibenarkan membuka kertas soalan sehingga dibenarkan;
3. Calon hendaklah menjawab semua soalan;
4. Calon dilarang membawa nota atau sebarang bahan rujukan kecuali yang dibenarkan.
5. Dilarang meniru semasa penilaian; dan
6. Dilarang membawa keluar kertas soalan dari bilik peperiksaan

KERTAS PENILAIAN INI MENGANDUNGI ...02.... MUKA SURAT BERCETAK

Soalan 1

- a. Briefly describe the three (3) basic principles of thinking skills:
(5 Marks)
- b. State and briefly explain the types of budgeting styles that are available under the budget strategy.
(5 Marks)
- c. Define what is competency and analytical skill.
(4 Marks)
- d. According to some surveys, work stress is the biggest source of stress in our lives. List four (4) potential causes of work stress
(2 Marks).

Soalan 2

- a. State and explain the five (5) quick stress reduction techniques?
(10 Marks)
- b. Discuss the steps to solve problem using a problem solving model.
(10 Marks)

ANSWER SCHEME

a) Briefly describe the three (3) basic principles of thinking skills:

- i) Principle 1 - “The creation of new knowledge (to the owner) may not necessarily result in innovation but it is a precursor to the instigation of that process.” The most powerful attribute of conceptual model building is that the owner can actually create and build new knowledge in excess of that which contributed to the development of the initial model. In order for learners to be able to think laterally, they must first create in their minds a conceptual framework/model of understanding. It is only then that they can build on this framework and improve upon it. If learners have only facts to work with, they cannot create new information from these alone.
- ii) Principle 2 – “Thinking is a discipline and as such calls for changes in the way we carry out our daily activities, and make decisions, and that requires a consciousness of thought.” In other words in order for learners to think about what they're doing they need to be encouraged into a discipline of questioning, and reflecting on their thoughts and thought processes and content. This is often referred to as metacognitive activity. It is the ability to think about your own thinking.
- iii) Principle 3 – “Knowledge can also be thought of as a product that can be collectively constructed/created (new knowledge).” Inevitably some educators will make the mistake of believing that unless there is concrete evidence in a physical format of the learner's understanding, then the learner does not understand the concept or principal being discussed.

b) State and briefly explain the types of budgeting styles that are available under the budget strategy. **3.1: Classic categories**

The classic budgeting style is to sit down, figure out your income, and then

assign spending limits to your most common expense categories. The idea is to try to limit the spending in each category.

3.2: Zero-based

With this budgeting style, you give every dollar a job. It's very regimented, and works best for those who know exactly how much money is coming in each month, and when it comes in. You account for all of your spending ahead of time, in an effort to come to zero each month.

3.3: Envelopes

One of the best ways to keep track of your spending is to use the envelope system, and pay for everything in cash. The idea is to set up envelopes, labeled with categories, for variable spending. Once the cash is gone from the appropriate envelope, you are done. You can move cash from envelope to another, but you don't get more cash from your account. This forces you to spend conscientiously, carefully thinking through your purchases.

3.4: Priority-based

All of important priorities are covered first, and then just spend until the rest is gone for the month. This requires that to track a spending so that it don't overdraw the account, but it doesn't require to set up limiting categories.

c) Define what is competency and analytical skill. (4 Marks)

Competency" is a cluster of related knowledge, skills, and attitudes that affects a major part of one's job (a role or responsibility), that correlates with performance on the job, that can be measured against well-accepted standards, and that can be improved via training and development. For example - you might have good interpersonal skills (skills), but will not be competent to join a company as Project Manager unless you possess adequate education / experience (knowledge) and the right temperament /

behaviour (attitude).

Analytical skills

Analytical skills are the ability to visualize, gather information, articulate, analyse, solve complex problems, and make decisions. Such skills include demonstration of the ability to apply logical thinking to gathering and analysing information, designing and testing solutions to problems, and formulating plans. These skills are essential in the workplace to ensure necessary problem solving occurs to keep productivity and other areas of the workforce functioning smoothly.

- d) According to some surveys, work stress is the biggest source of stress in our lives. List four (4) potential causes of work stress (2 Marks).

Answer:

- i) Being unhappy in your job
- ii) Having a heavy workload or too much responsibility
- iii) Working long hours
- iv) Having poor management, unclear expectations of your work, or no say in the decision-making process
- v) Working under dangerous conditions
- vi) Being insecure about your chance for advancement or risk of termination
- vii) Having to give speeches in front of colleagues
- viii) Facing discrimination or harassment at work, especially if your company isn't supportive

Soalan 2

- c. State and explain the five (5) quick stress reduction techniques? (10 Marks)

- i) Humour
 - a) Humour is one of the greatest and quickest devices for reducing stress.
 - b) Humour works because laughter produces helpful chemicals in the brain.
 - c) Humour also gets your brain thinking and working in a different way. It distracts

you from having a stressed mindset. Distraction is a simple effective de-stressor. It takes your thoughts away from the stress, and thereby diffuses the stressful feelings. Therefore most people will feel quite different and notice a change in mindset after laughing and being distracted by something humorous.

ii) Brisk walk and self-talk

- a) Change your environment. Go for a short quick brisk walk outside by leave the workplace building.
- b) Breathe in some fresh air and smell the atmosphere. Trees, rain, flowers, traffic fumes stimulate your senses with new things.
- c) On your way out keep saying to yourself out loudly.
- d) You can extend the exercise by going to a park and jogging a little or doing something energetic to get your body moving and relaxing.
- e) You can use other mantras or chants, depending on what you want to do and how far you want to get away from the stress causes.
- f) Sometimes the people said this is daft, but the daftness reduces the stress by removing you from the stress in mind and body.

iii) Rehydrate

- a) Get a big cup or a bottle of plain water. Most of us fail to drink enough plain water.
- b) All of your organs, including your brain, are strongly dependent on water to function properly. If you starve, your body will function below your best physically and mentally.
- c) Most of workplaces commonly have a very dry atmosphere due to air conditioning, which increases people's susceptibility to de-hydration.
- d) When you drink lot of water you need to pee. This gives you a bit of a break and a bit of exercise now and then, which also reduces stress.

iv) Catnap or powernap

- a) Take a quick nap. It is nature's way of recharging and re-energising. A 10-30 minutes' sleep is very helpful to reduce stress.

v) Make a cuppa

a) Making a cup of hot drink especially tea and coffee take your mind off your problems.

vi) Crying

a) Crying and weeping proper tears has a powerful helpful effect on stress levels. Sobbing and weeping does seem to release tension and stress for many people.

b. Discuss the steps to solve problem using a problem solving model. (10 Marks)

a. Identify the problem.

b. Explore the problem.

c. Set goals.

d. Look at Alternatives.

e. Select a possible solution.

f. Implement a possible solution.

g. Evaluate

Figure 3 – Seven step Problem Solving Model

a. Identify the problem

When you are boggled with problems, you feel a generalized and global worry about things. It is very important to pin point the source of your worry and anxiety. List down your problem so that you can come up with possible solutions. This is the most important stage in the problem solving strategy. Think about what irritates you most and where the trouble spots are. Do not be frightened due to the load of problem you are facing. Think positive and trust your intuition.

b. Explore the problem

When you are clear about what the problem is you need to think about from different angles. Analyze the problem in different ways is may help you find an effective solution. Some problems are very obvious, however others are not so easily identified. There are some technique to explore the problem such as

PEST analysis, SWOT analysis, Ishikawa analysis, PARETO analysis, Risk analysis, Failures Mode and Effect analysis and After Action Review

c. Set goals

Once you have thought about the problem from different angles you can identify your goals or what you want to achieve? Working out a goals is a vital part of the problem solving process.

d. Look at Alternatives

When you have decided what your goal/s is you need to look for possible solutions. The more possible solutions will be able to discover an effective solution. You can brain-storm for ideas. The aim is to collect as many alternative solutions as possible because some of the best solutions may arise from creative thinking during brain-storming. By taking the time to generate a range of creative solutions to the problem, you'll significantly increase the best possible solution,

e. Select a possible solution

From the list of possible solutions, sort out which are most relevant to a situation and which are realistic and manageable. When you have explored the consequences, you can identify the solution which is most relevant to you and is likely to have the best outcomes for your situation.

f. Implement a possible solution

Once you have selected a possible solution, you'll have many options to put it

into action. Decide what elements are needed for a realistic and practical solution, and think about the criteria you'll use to choose between potential solutions. You will need to have energy and motivation to do this because implementing the solution may take some time and effort. You can prepare yourself by planning when and how to do it.

g. Evaluate

Evaluating of the solution is very crucial. If the solution was successful in solving a problem, then you have effectively solved your problem. If you are not happy with the result, then you may choose another option from the list of brain-storming solutions, which will be most likely to produce the desired result. Useful techniques such as Paired Comparison Analysis, Decision Matrix Analysis and Risk Analysis are available in decision making.
