PENERANGAN / INFORMATION :

1 Definition Of Fact and Opinion

- 1.1: A fact is a piece of information that can be strictly defined, observed and proved true.
- 1.2: An opinion is a statement or viewpoint that expresses a belief, value, feeling, though, judgment, estimate and cannot be proved true or false.
- 1.3: For example, a person's age is a fact, but if someone is asked how old they feel, it is impossible to prove the person's answer to be true or false.

2 Relationship Principle

2.1: Everything in life starts and ends with relationships. Our existence starting from the womb has relief on our relationships to others. So relationship are fundamental for life, love and business.

2.2: There are some relationship principles for life.

- i) Build your network. A relationship must be giving and receiving. Help others with a need, issue, challenge, or problem they have and build a relationship.
- ii) Be generous with your time and wisdom and help others without any expectation of receiving something in return . Build a reputation as a generous person who thinks about others, and your network will overflow.
- iii) Start a relationship by having a great conversation. We connect with people by finding things in common, understanding what issues they are grappling with and sharing ideas.
- iv) Follow the person, not the position. Focus on developing relationships with smart, interesting, motivated, ambitious people; and following them throughout their careers.
- v) Cultivate your own interests. If you want to be a person of interest, you have to develop interesting characters.

NO. KOD / CODE NO.	Z-009-4: 2015 M05/P(5/5)	Muka Surat / Page : 3 Drpd / of : 8
---------------------------	---------------------------------	--

- vi) Become truly distinctive at something that's of value to others. In our personal lives, we are drawn to others based on common interests, chemistry, likeability, and other intangible qualities.
- vii) Be enthusiastic, passionate about your work and everything else you do.
- viii) Be authentic. If you're introverted, be comfortable about it; if you're extroverted, be that way all the time. You have to develop your own, based on who you are and your natural character. Whoever and whatever you are (funny, introverted, cautious, reflective, and so on) be that way all the time.
- ix). Be genuinely interested and caring in others. You will be more successful by being interested in others' success than by trying to get them interested in your success. If you're not truly interested in other people, you should not be in a client-facing role.
- x) Give some trust to start the trust building process. Trust is the glue that holds together every long-term relationship. To start the trust-building process, you often have to trust others. You need to assume positive intentions in their actions.
- xi) Demonstrate integrity at all times. Integrity is a state of wholeness in which you act in accordance with a set of coherent values or principles. In other words, you know what's right, you're clear about what you believe in, and you consistently follow your beliefs. So integrity must be done, not seem to be done. There are four key dimensions to integrity:
 - a. Honesty
 - b. Discretion
 - c. Reliability
 - d. Consistency
- xii) Be seen as contributing directly to your clients' important goals. You can exercise great relationship building skills as an individual advisor.

3 Problem Solving

3.1: Definition of Problem Solving

Problem solving is a process and skill that to be used when needing to solve immediate problems in order to achieve a goal.

3.2: Problem solving techniques

- i. Every one faces problems on a daily basis. Some people are good at solving them without taking too much stress. However, there are some people who have difficulty coping with their problems effectively and this kind of inability undermines their self esteem, affects their mood and also interferes with their professional and personal lives. Therefore, it is important to cope with problems in a way that it helps and empowers you. Obviously problems do not go away by themselves unless you take some drastic steps to overcome them. The trouble is people tend to dismiss problem solving. If you learn effectively use the problem solving steps, you will see how functional your life will become and you can save yourself from excessive worries, anxiety, and depression. When you take the right action, your problems vanished and you will be able to relax and feel relieved. It is important to take actions so that you can move on with your life goals otherwise, unresolved problems will continue to make you feel incompetent, worthless, and anxious.
- ii. There are seven-step to solve the problem.
 - a. Identify the problem.
 - b. Explore the problem.
 - c. Set goals.
 - d. Look at Alternatives.
 - e. Select a possible solution.
 - f. Implement a possible solution.
 - g. Evaluate

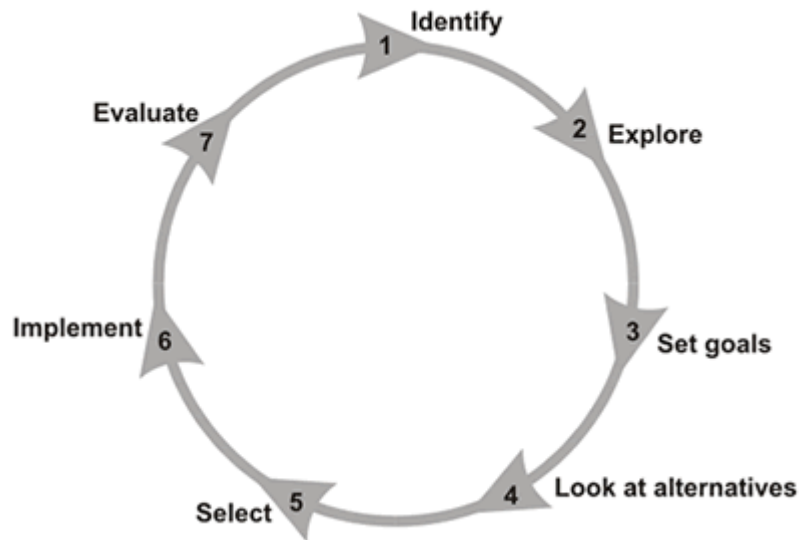

Figure 3 – Seven step Problem Solving Model

a. Identify the problem

When you are boggled with problems, you feel a generalized and global worry about things. It is very important to pin point the source of your worry and anxiety. List down your problem so that you can come up with possible solutions. This is the most important stage in the problem solving strategy. Think about what irritates you most and where the trouble spots are. Do not be frightened due to the load of problem you are facing. Think positive and trust your intuition.

b. Explore the problem

When you are clear about what the problem is you need to think about from different angles. Analyze the problem in different ways is may help you find an effective solution. Some problems are very obvious, however others are not so easily identified. There are some technique to explore the problem such as PEST analysis, SWOT analysis, Ishikawa analysis, PARETO analysis, Risk analysis, Failures Mode and Effect analysis and After Action Review

c. Set goals

Once you have thought about the problem from different angles you can identify your goals or what you want to achieve? Working out a goals is a vital part of the problem solving process.

---------------------------	---------------------------------	--

d. Look at Alternatives

When you have decided what your goal/s is you need to look for possible solutions. The more possible solutions will be able to discover an effective solution. You can brain-storm for ideas. The aim is to collect as many alternative solutions as possible because some of the best solutions may arise from creative thinking during brain-storming. By taking the time to generate a range of creative solutions to the problem, you'll significantly increase the best possible solution,

e. Select a possible solution

From the list of possible solutions, sort out which are most relevant to a situation and which are realistic and manageable. When you have explored the consequences, you can identify the solution which is most relevant to you and is likely to have the best outcomes for your situation.

f. Implement a possible solution

Once you have selected a possible solution, you'll have many options to put it into action. Decide what elements are needed for a realistic and practical solution, and think about the criteria you'll use to choose between potential solutions. You will need to have energy and motivation to do this because implementing the solution may take some time and effort. You can prepare yourself by planning when and how to do it.

g. Evaluate

Evaluating of the solution is very crucial. If the solution was successful in solving a problem, then you have effectively solved your problem. If you are not happy with the result, then you may choose another option from the list of brain-storming solutions, which will be most likely to produce the desired result. Useful techniques such as Paired Comparison Analysis, Decision Matrix Analysis and Risk Analysis are available in decision making.

4. Decision Making

4.1 Problem solving and decision-making are important skills for organization and daily life. Problem-solving often involves decision-making, and decision-making is

NO. KOD / CODE NO.	Z-009-4: 2015 M05/P(5/5)	Muka Surat / Page : 7 Drpd / of : 8
---------------------------	---------------------------------	--

important for management and leadership. There are processes and techniques to improve decision-making and the quality of decisions.

4.2 Problem-solving and decision-making are closely linked, and each requires creativity in identifying and developing options, for which the brainstorming technique is useful. For group problem-solving and decision-making, or when a consensus is required, workshops help.

4.3 Good decision-making requires a mixture of skills: creative development and identification of options, clarity of judgement, firmness of decision, and effective implementation.

4.4 In rational decision making approach, hard (quantitative) data obtained through observation or mathematical (statistical) analysis or modeling is systematically collected for making long-term decisions.

4.5 There are useful methods or steps for effective decision-making and problem-solving process.

- i) Define and clarify the issue. Is the matter urgent, important or both. This can be decide by analysis such as Pareto Principle analysis.
- ii) Gather all the facts and understand their causes.
- iii) Think about or brainstorm possible options and solutions.
- iv) Consider and compare the 'pros and cons' of each option. For complex decisions where there are several options, create a template which enables measurements according to different strategic factors by SWOT, PEST or Porter analysis.
- v) Select the best option. Avoid vagueness and weak compromises in trying to please everyone.
- vi) Explain your decision to those involved and affected, and follow up to ensure proper and effective implementation.

5. Rational Strategies

5.1 Rational is a explanation of the logical reasons or principles employed at a decision or estimate making.

NO. KOD / CODE NO.	Z-009-4: 2015 M05/P(5/5)	Muka Surat / Page : 8 Drpd / of : 8
---------------------------	---------------------------------	--

5.2 It is usually document on why a particular choice was made, how the basis of its selection was developed, why and how the particular information or assumptions were relied on and why the conclusion is deemed credible or realistic.

SOALAN / QUESTION :

1. What is different between fact and opinion?
2. What is relationship principle for life?
3. Explain briefly the step of problem solving?
