PENERANGAN/INFORMATION :

1. Presentation Structure, Knowledge and Audience

1.1 A presentation is a means of communication that can be adapted to various speaking situations, such as talking to a group, addressing a meeting or briefing a team.

1.2 To be effective, step-by-step preparation and the method and means of presenting the information should be carefully considered. A presentation requires a person to get a message across to the listeners and will often contain a '*persuasive*' element. It may, for example, be a talk about the positive work of his organisation, what you could offer an employer, or why you should receive additional funding for a project.

1.3 In making a decision about your presentation method, you have to take into account several key aspects. These include:

i) The facilities available to you by way of visual aids, sound systems, and lights. Obviously you cannot use facilities that are not available. If you are told that you will need to present without a projector, you're going to need to decide on a method that works without slides.

ii) The occasion.

A formal conference of 200 people will require a very different approach from a presentation to your six-person team. And a speech at a personnel function is totally different again. Consider the norms of the occasion. For example, at a certain function, you are not expected to use slides or other visual aids.

iii) The audience and the topic.

If it's a small, informal event, you will be able to use a less formal method. You might, for example, choose to give your audience a one-page handout, perhaps info graphic that summarizes your key points, and talk them through it. A more formal event is likely to need slides.

iv) Your experience in giving presentations.

More experienced presenters will be more familiar with their own weak points, and able to tailor their preparation and style to suit. However, few people are able to give a presentation without notes. Even the most experienced speakers will

NO. KOD / CODE NO.	Z-009-4: 2015-M06/P(2/2)	Mukasurat / Page : 3 Drpd / of : 8
---------------------------	---------------------------------	---

usually have at least some form of notes to jog their memory and aid their presentation.

v) Your familiarity with the topic.

As a general rule, the more you know about it, the less you will need to prepare in detail, and the more you can simply have an outline of what you want to say, with some brief reminders.

vi) Your personal preferences.

Some people prefer to 'bask it' (or 'wing it') and make up their presentation on the day, while others prefer detailed notes and outlines. You will need to know your own abilities and decide how best to make the presentation. When you first start giving presentations you may feel more confident with more detailed notes. As you become more experienced you may find that you can deliver effectively with less.

2. Information Sources

2.1 Information sources can define as information for somebody, such as, anything that might inform a person about something or provide knowledge about it. Different types of questions require different sources of information. Information sources may be observations, people, speeches, documents, pictures, organizations, websites, etc. They may be primary, secondary sources, tertiary sources and so on.

2.2 In search of the ingredients needed for presentation, you need to understand a given title and source to find. At the same time recognize also the goal of the presenter representing organization. Sensitive to what audience needs and where is the strengthen speech to highlight.

2.3 Few tips to be known;

i. The Objective

You have been asked to speak to a group of people. First, ask yourself 'why?' What is the purpose of the presentation, what is the objective, what outcome(s) do you and the audience expect?

It is useful to write down the reason you have been asked to present so you can use this as a constant reminder while you prepare the presentation. There are many reasons for giving a presentation or talk, but never lose sight of your

NO. KOD / CODE NO.	Z-009-4: 2015-M06/P(2/2)	Mukasurat / Page : 4 Drpd / of : 8
---------------------------	---------------------------------	---

objective as determined when you were asked and accepted the invitation.

ii. The Subject

The subject of what you are going to talk about comes from the objective but they are not necessarily one and the same thing.

For example:

- a. The subject may be given to you by an inviting organisation.
- b. You may be knowledgeable in particular field.
- c. The subject may be entirely your choice within certain limitations.

iii. The Audience

Before preparing material for a presentation, it is worth considering your prospective audience. Tailoring your talk to the audience is important and the following points should be considered:

- a. The size of the group or audience expected.
- b. The age range - a talk aimed at retired people will be quite different from one aimed at teenagers.
- c. Gender - will the audience be predominantly male or female?
- d. Is it a captive audience or will they be there out interest?
- e. Will you be speaking in their work or leisure time?
- f. Do they know something about your subject already or will it be totally new to them? Is the subject part of their work?
- g. Are you there to inform, teach, stimulate, or provoke?
- h. Can you use humour and if so what would be considered appropriate?

iv. The Place

It is important to have as much advance information as possible about the place where you are going to speak. Ideally, try to arrange to see the venue before the speaking event, as it can be of great benefit to be familiar with the surroundings.

It does much to quell fear if you can visualise the place while you are preparing your talk. Additionally, it would also give you the opportunity to try out your voice.

If at all possible, you need to know:

- a. The size of the room.

NO. KOD / CODE NO.	Z-009-4: 2015-M06/P(2/2)	Mukasurat / Page : 5 Drpd / of : 8
---------------------------	---------------------------------	---

- b. The seating arrangements and if they can be altered.
- c. The availability of equipment, e.g., microphone, overhead projector, flip chart, computer equipment.
- d. The availability of power points and if an extension lead is required for any equipment you intend to use.
- e. If the room has curtains or blinds. This is relevant if you intend to use visual aids, and so that you can ensure the correct ambiance for your presentation.
- f. The position of the light switches. Check if you need someone to help if you are using audio/visual equipment and need to turn off the lights.
- g. The likelihood of outside distractions, e.g., noise from another room.
- h. The availability of parking facilities so you do not have a long walk carrying any equipment you might need to take.
- v. If you do have a choice of when to give your presentation - consider the following points:
 - a. Morning:

The morning is the best time to speak because people are generally at their most alerts. However, late morning may start to present problems as people begin to feel hungry and think about lunch.
 - b. Afternoon:

Early afternoon is not an ideal time to make a presentations since after lunch people often feel sleepy and lethargic. Mid afternoon is a good time, whereas at the end of the afternoon people may start to worry about getting home, the traffic or collecting children from school.
 - c. Evening or Weekend:

Outside regular office hours, people are more likely to be present because they want to be rather than have to be there. There is a higher likelihood of audience attention in the evening, providing of course that the presentation does not go on for too long when people may have to leave before the presentation has finished.

3. Graphic Standard Rules

3.1 The use of the language should be identified in the presentation because writings graphic should be simple yet real. The title and picture with caption plays an important role in order to give an overview of the issues presented.

But, should only use visual aids if they are necessary to maintain interest and assist comprehension in presentation. Do not use visual aids just to demonstrate technological competence - doing so may compromise the main point of presentation - getting your messages across clearly and concisely.

3.2 If visual aids are used well they will enhance a presentation by adding impact and strengthening audience involvement, yet if they are managed badly they can ruin a presentation. Most visual aids will need advance preparation and should be operated with efficiency. If you wish to use such aids in an unfamiliar room or location, check what facilities are available in advance so that you can plan your presentation accordingly.

3.3 Purpose of the graphic information.

- a. Information graphics or info graphics are graphic visual representations of information, data or knowledge intended to present information quickly and clearly. They can improve cognition by utilizing graphics to enhance the human visual system's ability to see patterns and trends. Similar pursuits are information visualization, data visualization, statistical graphics, information design, or information architecture.
- b. Info graphics have evolved in recent years to be for mass communication, and thus are designed with fewer assumptions about the reader's knowledge base than other types of visualizations. Isotopes' are an early example of info graphics conveying information quickly and easily to the masses.

3.4 Symbols and signs

a. Symbols:

Something that represents or suggests something else. Symbols often take the form of words, visual images, or gestures that are used to convey ideas and beliefs. All human cultures use symbols to express the underlying structure of

NO. KOD / CODE NO.	Z-009-4: 2015-M06/P(2/2)	Mukasurat / Page : 7 Drpd / of : 8
---------------------------	---------------------------------	---

their social systems, to represent ideal cultural characteristics, such as beauty, and to ensure that the culture is passed on to new generations. Symbolic relationships are learned rather than biologically or naturally determined, and each culture has its own symbols.

b. Signs:

Something that indicates or acts as a token of a fact, condition or an action or gesture intended to convey information or a command.

Figure 1. Graphic signs.

3.5 Appropriate graphic format.

For the accuracy of the presentation of the text together with the visual aid in the presentation, make sure that the arrangement of text and visuals performed and tested in advance. Also make sure proof read visual graphic and text are done to avoid caption and picture errors. Any mistakes can influence the image of the presenter and his organisation.

---------------------------	---------------------------------	---

SOALAN/QUESTION :

1. How to ensure the effective of presentation structure?
2. How to define the right information sources for effective presentation?
3. Explain why graphic standard rules are important in effective presentation?
