TAJUK/ TITLE : CHANGE MANAGEMENT OBJECTIVE

TUJUAN/ PURPOSE :

This Information Sheet will explain about the objective of change management. Change management is an approach to transitioning individuals, teams, and organizations to a desired future state. In a project management context, change management may refer to a project management process wherein changes to the scope of a project are formally introduced and approved.

PENERANGAN/ INFORMATION :

1. The Nature And Complexity Of Work

1.1 Change management is a structured approach for ensuring that changes are thoroughly and smoothly implemented, and that the lasting benefits of change are achieved.

1.2 The focus is on the wider impacts of change, particularly on people and how they, as individuals and teams, move from the current situation to the new one. The change in question could range from a simple process change, to major changes in policy or strategy needed if the organization is to achieve its potential.

1.3 Theories about how organizations change draw on many disciplines, from psychology and behavioral science, through to engineering and systems thinking. The underlying principle is that change does not happen in isolation – it impacts the whole organization (system) around it, and all the people touched by it.

1.4 In order to manage change successfully, it is therefore necessary to attend to the wider impacts of the changes. As well as considering the tangible impacts of change, it's important to consider the personal impact on those affected, and their journey towards working and behaving in new ways to support the change. The Change Curve is a useful model that describes the personal and organizational process of change in more detail.

1.5 Change management is, therefore, a very broad field, and approaches to managing change vary widely, from organization to organization and from project to project. Many organizations and consultants subscribe to formal change management methodologies. These provide toolkits, checklists and outline plans of what needs to be done to manage changes successfully.

1.6 When we are tasked with "managing change" (irrespective of whether or not we subscribe to a particular change management approach), the first question to consider is what change management actually means in our

situation. Change management focuses on people, and is about ensuring change is thoroughly, smoothly and lastingly implemented.

1.7 The following objectives (goals) are how organizations deliver change:

- i) **Establish a Culture of Innovation**
If our culture is in the habit of resisting change - every change will be difficult. Establishing a culture that's creative and accepting of change is a high priority objective for every change management practice.
- ii) **Establish Principles for Change**
Change management principles are the lifeblood of our innovation culture. They set expectations to everyone in our organization — we aggressively innovate and change
- iii) **Develop Innovative Strategies**
Change management is a strategy game. Develop and implement strong culture, communication and performance management strategies.
- iv) **Establish Best Practices for Innovation**
Develop best practices for tactical change management.
- v) **Develop Change Leaders**
Change is a leadership activity at every level of your organization. Develop our leaders of change.
- vi) **Empower Agents of Change**
Delegate sufficient authority to leaders of change and support them.
- vii) **Identify Change Accountability & Responsibility**
Set clear expectations for change accountability and responsibilities.
- viii) **Align Employee Objectives to Change**
Plan to measure all employees according to change objectives. Set performance expectations with every employee and invite commitment.
- ix) **Communicate and Socialize Change**
Communication and socialization of change is critical to reducing resistance to change.
- x) **Address Concerns and Improve Change**

Socialize change with a genuine intention to improve it. Address employee concerns and act on valuable feedback.

xi) Apply Knowledge to Change

Knowledge underpins all change. Ensure that knowledge is leveraged and improved.

xii) Train Employees to Prepare Them For Change

Training reduces change execution problems and improves acceptance of change.

xiii) Achieve Employee Participation In Change

It's not enough to give employees objectives to support change. Change management seeks employee engagement. Deploy strategies to energize your organization around change.

xiv) Create a Sense of Urgency For Change

Build empathy in our people for the change. Communicate to ensure employees are aware of the external forces (e.g. competition) that make change an urgent need.

xv) Maintain Change Momentum

Too often changes start on a high note and then lose momentum. Keep employees informed and engaged on a daily basis.

xvi) Recognize & Celebrate Change Milestones

Celebrate small victories to maintain change velocity.

xvii) Manage Performance

Change management actively aligns with performance management.

xviii) Reward Agents of Change

Establish incentives for the agents of change early on. Reward results.

xix) Gain Acceptance of Change

Launch the change and gain acceptance.

xx) Learn From Change

Use our failures and successes to build organizational knowledge.

xxi) Measure Change Results

Measure the business results of change.

xxii) Sustain Change

Change is a long term, sustainable strategy. Avoid destroying the future with a change today.

2. Project Resources

2.1 The resources of an organization consist of people, materials, equipment, knowledge and time. Organizations typically have limited resources; therefore, tradeoffs on what project resources are expended and when are made every day within organizations. A resource allocation plan is an important tool in effective management of scarce resources.

2.2 The timing of the need of those resources can be and should be determined within the project schedules. A resource plan, which describes the type of resource needed and the timing of that need, is critical to effective resource management. As the project schedule changes, the resource plan must also be flexible enough to adjust as these changes occur.

2.3 In developing resource plans, there is little chance that the project manager will have all of the necessary resources assigned to the project at its start. The fact is when starting a project the details of that project are typically unknown. Therefore, knowing the types and duration of resources necessary is not always possible.

2.4 Known knowns are events that can be planned for. In building the schedule, some deliverables can be decomposed in sufficient detail creating tasks, while other deliverables will only be known at the highest level. When details of a deliverable are not sufficiently known, a planning package should be used.

2.5 The details of the deliverables defined within planning packages can be considered known unknowns, or risks. In these instances, the work has not been fully decomposed.

2.6 Known planning events, as well as planning packages, can be assigned individual resources and durations that have been established by the people who will be doing the work. The only difference is in planning packages, the duration and resource estimates are typically less accurate. The use of historical

information or industry standards can provide a higher degree of confidence in estimates, when available.

2.7 It is not necessary to have all deliverables decomposed and assigned to individuals prior to beginning work on a project. In fact, it is very common to set a baseline schedule and resource plan based on planning package estimates.

2.8 As the project progresses, these known unknowns become clearer to the project team warranting changes within the project schedule and resource plan.

2.9 Events that cannot be planned for are called unknown unknowns. These events are not known in the realm of possibilities, yet could occur. An example is a warehouse fire that destroys inventory and delays the project completion. This would not normally be factored in as a known event during the project planning, so it is an unknown unknown.

2.10 Since projects are unique and temporary endeavors, project managers will always work in a world of unknowns. Therefore, resource management and planning should continue throughout the project life cycle.

3 Work Schedule

3.1 Milestone

- i) Many times the implementation team will focus on Go and No Go decisions that give special emphasis to executing the change in a way as technically efficiently as possible, without necessarily considering the effects on the people involved.
- ii) We know that people generally follow a predictable path when dealing with change and transitions.
- iii) Here are five milestones that help the change management team ensure that people make the transitions that will make the change easier and more likely

to succeed:

- a) We have adequately communicated the reasons for the project so that everyone is AWARE of the need for change.
 - b) We have created and communicated an engaging vision of the future so that people DESIRE the change.
 - c) We have identified legitimate concerns from everyone involved, and provided everyone with the KNOWLEDGE to address their concerns and contribute to project.
 - d) We have given people the ABILITY to participate, test and explore the options in the project and maximize its potential.
 - e) We have provided REINFORCEMENT and rewards so that people can own, internalize and celebrate the success of the project.
- iv) Think of these as Go and No Go statements where the team should only move on to the next step in the project if they can comfortably agree with the milestone statement.
- v) The model known as ADKAR (Awareness, Desire, Knowledge, Ability, Reinforcement), is well researched and has been around for a long time. You can see from the diagram how the milestones fit in with the different stages of peoples' reactions to change.

3.2 Change Management Activities

- i) Once we have considered the change management objectives and scope, we will also need to consider the specific tasks. Again, the range of possible activities is broad. It's a question of working out what will best help we meet the change challenge in hand.
- ii) The essence of this is to identify the tasks that are necessary if we are going to give change the greatest chance of success.

⁴ NO. KODI CODE NO.	Z-009-4:2015-M07/P(1/5)	Mukasurat/ Page : 8 Drpd/ of : 14
--	-------------------------	--

- iii) Coming from this, the activities involved in managing change can include:
 - a) Ensuring there is clear expression of the reasons for change, and helping the sponsor communicate this.
 - b) Identifying "change agents" and other people who need to be involved in specific change activities, such as design, testing, and problem solving, and who can then act as ambassadors for change.
 - c) Assessing all the stakeholders and defining the nature of sponsorship, involvement and communication that will be required.
 - d) Planning the involvement and project activities of the change sponsor(s).
 - e) Planning how and when the changes will be communicated, and organizing and/or delivering the communications messages.
 - f) Assessing the impact of the changes on people and the organization's structure.
 - g) Planning activities needed to address the impacts of the change.
 - h) Ensuring that people involved and affected by the change understand the process change.
 - i) Making sure those involved or affected have help and support during times of uncertainty and upheaval.
 - j) Assessing training needs driven by the change, and planning when and how this will be implemented.
 - k) Identifying and agreeing the success indicators for change, and ensure they are regularly measured and reported on.
- iv) Remember, these are just some typical change management activities. Others may be required in our specific situation. Equally, some of the above may not be within our remit, so plan carefully, and coordinate with other people involved.

3.3 Change Management Process

- i) The change management process is the sequence of steps or activities that a change management team or project leader would follow to apply change management to a project or change. Based on Prosci's research of the most effective and commonly applied change, they have created a change management process that contains the following three phases:

Figure 3.1 : Preparing for change (Preparation, assessment and strategy development).

- ii) The first phase in Prosci's methodology is aimed at getting ready. It answers the question. "how much change management is needed for this specific project?" The first phase provides the situational awareness that is critical for effective change management.
- iii) Outputs of Phase 1
- a) Change characteristics profile
 - b) Organizational attributes profile
 - c) Change management strategy
 - d) Change management team structure
 - e) Sponsor assessment, structure and roles

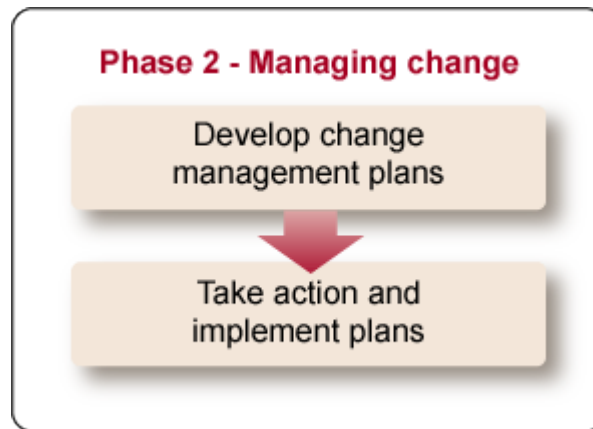

Figure 3.2 : Managing change (Detailed planning and change management implementation).

- iv) The second phase of Prosci's process is focused on creating the plans that are integrated into the project activities - what people typically think of when they talk about change management. Based on Prosci's research, there are five plans that should be created to help individuals move through the ADKAR Model.
- v) Outputs of Phase 2
 - a) Communication plan
 - b) Sponsor roadmap
 - c) Training plan
 - d) Coaching plan
 - e) Resistance management plan

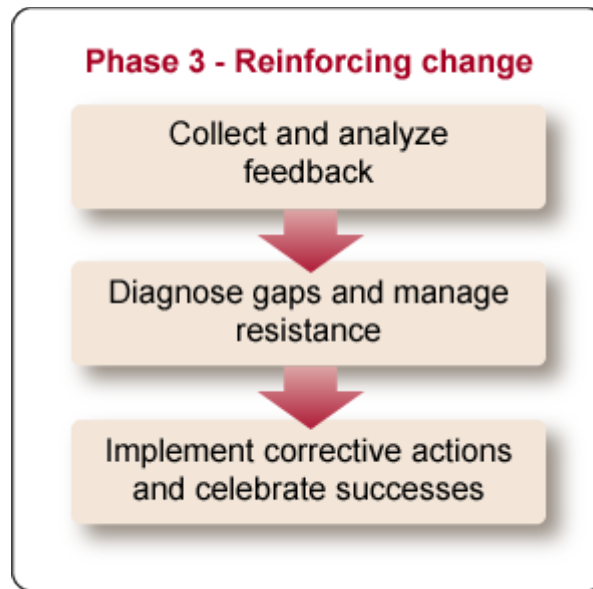

Figure 3.3 - Reinforcing change (Data gathering, corrective action and recognition).

- vi) Equally critical but most often overlooked, the third phase of Prosci's process helps project teams create specific action plans for ensuring that the change is sustained. In this phase, project teams develop measures and mechanisms to see if the change has taken hold, to see if employees are actually doing their jobs the new way and to celebrate success.
- vii) Outputs of Phase 3
 - a) Reinforcement mechanisms
 - b) Compliance audit reports
 - c) Corrective action plans
 - d) Individual and group recognition approaches
 - e) Success celebrations
 - f) After action review

3.4 Deadline

- i) The following concepts will help the organization deal with their deadlines.

a) Two-way Communication

The first thing to communicate to the team about meeting deadlines is to communicate. It is vital that everyone on the team understands the importance of two-way communication in meeting deadlines. Deadlines should be communicated often and in advance by the manager so that everyone understands the deadlines that are coming down the pipeline. On the flip side, the team needs to understand that they need to communicate the progress and status of meeting their deadlines. The manager will be provided with needed support for meeting deadlines.

b) Task Breakdown

In the plan, tasks should be broken down into the smallest parts that can be tracked. All the tasks will have deadlines, but within the plan, some deadlines are more important than others. As the schedule is created and the tasks are broken down into units of work that the employees will perform, the manager should work to identify the major deadlines that must be met by the employees. These deadlines might be the critical path, or they might be dictated in the contract, or identified by some other means during the planning phase. All of that information must be communicated clearly to the employees.

c) Lead Time and Lag Time

Managers may spend a great deal of time working with the lead and lag time of tasks in the schedule, and it is important that the team also understands the lead and lag time for tasks. This will help them see the big picture and stay focused on meeting the deadlines. If they know why they need to wait before starting a certain task or why some tasks overlap and others do not, then they will be able to keep better track of what is going on with their work because they understand the big picture.

-------------------------------	-------------------------	---

d) Multi-tasking Versus Focus

In today's world, almost everyone multi-tasks. It seems to be a constant around us. Cell phones and alerts go off on your desk, in the evening, emails ding at you, and even when you are away from the office, you carry your job in your pocket. It is worth discussing with your project team that focusing on one task at a time can be a huge benefit in completing work timely and with quality results. Tuning out the emails and distractions will help everyone get the job done. It can be hard to unplug from all the distractions, but focusing on the work at hand is well worth it when you are faced with hard deadlines that must be met.

- ii) Change management is a broad discipline that involves ensuring change is implemented smoothly and with lasting benefits, by considering its wider impact on the organization and people within it. Each change initiative us manage or encounter will have its own unique set of objectives and activities, all of which must be coordinated.
- iii) As a change manager, the role is to ease the journey towards new ways of working, and need a set of tools along the way.

--	-------------------------	---

SOALAN/ QUESTIONS :

1. What is the definition of change management?
2. What is the first question to consider, when you are tasked with managing change?
3. Discuss, how the change management will be occurred in the organizations.
4. List 5 (five) milestones that help the change management team ensure the change easier and more likely to succeed.
5. State the activities involved in the management change.
6. Based on Prosci's research, what is the the most effective activities to execute the change management process?
7. List the deadlines concepts, in order to ensure the change management process achived.
