TAJUK/TITLE: SOFTWARE APPLICATION ADOPTION

TUJUAN/PURPOSE :

This Information Sheet is intended to describe on System Application Adoption requirements to maintain and ensure information technology applications in the organisation are current. The person who is competent in this CA shall be able to utilize system application in accordance with recommended practices.

PENERANGAN/INFORMATION:

1. What is IT applications?

1.1 An application is any program, or group of programs, that is designed for the end user. Application software can be divided into two general classes: **systems software** and **applications software** :

- i) Applications software (also called *end-user programs*) include such things as database programs, word processors, Web browsers and spreadsheets. Figuratively speaking, applications software sits on top of **systems software** because it is unable to run without the operating system and system utilities.
- ii) Systems software consists of low-level programs that interact with the computer at a very basic level. This includes operating systems, compilers, and utilities for managing computer resources.

Picture 1.1 Applications in IT usage

2. What are the 2 basic principle components of a computer?

2.1 Computer hardware

The collection of physical parts of a **computer** system. This includes the **computer** case, monitor, keyboard, and mouse. It also includes all the parts inside the **computer** case, such as the hard disk drive, motherboard, video card, and many others. **Computer hardware** is what you can physically touch.

2.2 Computer software

Software is any set of machine-readable instructions that directs a computer's processor to perform specific operations. A combination of hardware and software forms a usable computing system

3. What is software applications?

5.1 Application software is a set of one or more programs designed to carry out operations for a specific application. Application software cannot run on itself but is dependent on system software to execute. For example: MS Word, MS Excel, console game, library management system, billing system, etc.

5.2 There are countless desktop applications out there, and they fall into many different categories. Some are more full-featured (like Microsoft Word), while others may only do one or two things (like gadgets). Below are just a few types of applications you might use:

- i) **Office software:** Office softwares allows you to manage/create/edit documentation using word processor,presentation and spreadsheets softwares. A few of the well-known office softwares used are Microsoft Word, Excel and Powerpoint.There are Paid Office Softwares and Open Source Office Softwares (free). There are also offline and online types.

Picture 3.2.a Microsoft Word, Excel and Powerpoint

- ii) **Financial:** Finance software, such as Quicken, allows you to keep track of your income and expenses and create a budget, among other tasks. Most personal finance programs can automatically download information from your bank so you don't have to manually type in all of your transactions.
- iii) **Web browsers:** A web browser is the tool you use to access the Internet. Examples of browsers include Internet Explorer, Firefox, Google Chrome, Opera and Safari.

Picture 3.2.b Popular web browsers

- iv) **Games:** They range from card games such as Solitaire to action games like Halo 2. Many action games require a lot of computing power, so they may not work unless you have a higher computer specification.
- v) **Media players:** If you want to listen to MP3s or watch movies you've downloaded, you'll need to use a media player.
- vi) **Gadgets:** Sometimes called widgets, these are simple applications you can place on your desktop (or on the Dashboard if you're using a Mac). There are many different types of gadgets, and they include calendars, calculators, maps, and news headlines.
- vii) **Multimedia editing/production/manipulation :** These are specific softwares that focuses on its sole purpose. Most notable software, for example, for graphic editing is Adobe Photoshop. This type of software deals with specific and complex algorithms/programming that manipulates the hardwares and software to the users desire.
- viii) **Programming :** These applications specifically utilizes programming codes knowledge and algorithms to produce series of commands, instructions, softwares or applications

4. IT problems

4.1 During utilization of IT application, it is normal to encounter problems especially technicalities. It is usually handled by the IT Department for trouble shooting.

4.2 However, there are several steps that can be taken to troubleshoot any problems that might arise before the expert handles the technical aspect. They are :

- i) First, ask yourself: is there really a problem here?
- ii) Acknowledge the problem.
- iii) Ask for help from the correct personnel.
- iv) Use 80 percent of your time to find solutions instead of complaining.
- v) Break the problem down into smaller pieces.
- vi) Find the opportunity and/or lesson within the problem.

-------------------------	---------------------------------	--

5. What is document printing?

5.1 Digital printing describes the process of transferring a document on a personal computer or other digital storage device to a printing substrate by means of a device that accepts text and graphic output. As with other digital processes, information is reduced to binary code, or "digitized," to facilitate its storage and reproduction. Digital printing has steadily replaced lithography in many markets, especially at the consumer and business level, as a result of its substantially lower production costs.

5.2 The following peripheral s are all capable of digital printing:

- i) Inkjet printer
- ii) Laser printer
- iii) Multifunctional peripheral

5.3 In normal use of documentations, software that utilizes words, excels or PowerPoint are the usual applications used and their output are usually printed apart from softcopies.

Picture 5.3 Printing made easy

5.4 Special attention is paid towards printing only the necessary documents and only prints what is correct to avoid wastage. This complies to the Green Concept philosophy.
